WORLD.

ON THE SUFFERINGS OF THE

ON THE SUPPLEMENT OF THE WORLD.

Unima suffering in the direct and immediate object in life, our anisance, must enhance fail of its aim. It is absent to hook upon the onercomes amount of pain that abounds overgwhere in the world, and originates to needs and necessities inspensible from life itself, as serving an parpase at all and the equation frame observe. Each esparate minfortune, as is come, reome, no drobt to be seenthing asseptiment; but minfortune in general in the rule.

I know of no greater absordity than that propounded by most systems of philosophy in dealaring stul to be angeliave in the chemotor. End is just what is positive, it reakes its own existence felt. Leibnits in perituisally senourmed to defend this absurdity; and he seeks to strongthou his position by using a pulpable and paltry cophism.* It is the good which is negative, in other words, happmens and satisfaction always imply some desirn in lifited, some state of pain brought to an end.

This explains the fact that we generally find

Trenstator's Note, et. Third 6 100 Leabelite august that o'll he augustur quality—a.e., the absence of good, and that the aster each executably posture dismertor is an amendmist add, not as manufact and the security of the second of the property of least, and the softers govern of compression to freezing water as an amendment and not on measuring part of the nature of world. The fact is that the power of expansion in freezing water is revilly an amenum of repulsary assempts the molecules; and fleshapanamy as quality and making the whole worksets.

planers to he see marrly so planes on we superied, and pain very much man painted.

The planature in this world, it falls been said, outweight the pain; or, at may rule, them is an even behans between the two. If the mealer without to eathority whether this attainment is term, let him nonpare the respective fashings of two quincile, one of which is supposed in eating the other.

The bank emandation in minintense or affliction of ony kind with he this thought of other people who are in a still worse plight than yourself, and this is a form of consulation open so every one. But which an awful fast this means for machind an awhole;

We are like humbs in a field, disporting thousastwo under the aye of the butcher, who chooses out first one and then another for his proy. Bo is that it our good days we are all unconnoises of the vell Fate may have presently in store for us—definess, poverty, mutualistics, loss of sight or vesses.

No little part of the tormest of enistance lies in this, that Time is continually preving upon an never letting as him breath. but storage coming after as like a tankmaster wide a whip. If at any moment Time stays his band, it is only what we are delivered over to the misery of inventee.

Het calefortune has its uses, for, as our bodily frames would best number if the presence of the educarphars were removed, as, if the tives of meawers relieved of all meet, hashing and advanty; if averything they best in hand were framewall, they would be so swolless with arramewer lists, though they might not beset, they would present the speciation of unbridled fully—may, they would go med. And I may may may may further that a curtain amount of care or pain or trockle in measuring for every man at all times. A ship without ballest in measure and will may go stemight.

Carlain it in that much, wavey, labour and trouble, form the lot of absent all man their wints libe long. But it all wishes were fulfilled as soon as they areas, how would not access the little world wave a paretise of lurgry and seen, when dowing with sails and bonay, where every Jack obtained his Jill at once and without any difficulty, uses would be their die of breeden or hang themselves, or shore would be warn, measures, and murders, so that in the end muskind would infile more suffixing on reall them it has how to accept at the hands of Measure.

In early youth, as we contamplets our coming life, we are like children in a theatre below the metals is relead, sitting there in high spirite and eagerly walting for the play to hopin. It is a blessing that we do not know what is really going to happen. Could we foresee it, there are times when children might some like inaccent prisuseen, condemned, not to death, but to life, and as yet all unconscious of what their surfaces means. However, and are very man derive to reach old age; is either turnin, a state of life of which it may be until : "It is but do-day, and it will be wome to-marrow; and as on till the worst of all?"

If you try to imagine, or nearly on you one, whatan amount of minny, pain and suffering of every high the state shimes upon in its comma, you will admit that it would be much better if on the surth as little as an at the moon the sum were able to call forth the phenomena of life; and R, here so there, the surface were till in a savelablime state.

Again, you may holk upon life as an unprofitable upineds, distorbing the blassed calm of non-activiness. And, is any man, even shough things fave gons with you telerably well, the longer you live the more clearly you will feel their, we the whole, life is a disappointment, map, a chees

If two teas who were friends in their youth used again when they are old after being separated for a life-time, the chief feeling they will have at the sight of such other will be one of outsplots that of the said if a sa whole, because their thoughts will be carried back to that saries tone whom life seemed so fair so is lay specad out before those if the roy light of daws, promised so match—such then parformed so libtle. This feeling will so completely predominate over every other that they will not even consider is messessed to give it weeks; but on either mide it will be directly assessed, and form the ground-work of all they have to take about

He who lives to not tree or throu generations it like a man who site some tame in the conjunct's both \$\mathbb{M}\$ is fair, and witchese the performance tweet or thries is succession. The tricks were meant to \$\mathbb{M}\$ seen only once, and when they are no longer a saveity stad stars to desprey their effects is some.

While up some is graph to be curved for his lot, there are counties amakers whose fate is to be deployed.

Life is a tank to be done. It is a time thing to may defuncture set; it means that the man has done his tank

If children were brought into the world by an act of pure reason alone, would the formes nece continues to wrist? Would not a man rather tawn so man's sympathy with the consing generation as to years is the borden of axistuate? or at any rate not take is upon himself to impose that burden open it is cold blood.

I shall be told, I suppose that my philosophy is comforthan—beauses I spank the foruth; and people prafer to be assured that everything the Lord has made in good. On to the pricets, then, and lawre philosophers in passes I at any rote, do not sake us to ascommodate over doctrines to the Issuem you have been laught. That is what those remeals of sham philosophers will do fer you. Ask them for any doctrine you please, and you will got it Your University preference are bound to pressit aptimize; and it is an easy and agreeable tank to upon these these theories.

I have reminded the rander that every state of welfars, every feeling of melification, is negative in its character; that is to may, it menimus in freedom from pain, which is the positive element of anistanes. It follows, therefore, that the happiness of any given, life is to be measured, not by the joys and planaurs, but by the axious to which it has been fewer suffering—from positive oril. If this is the tree steadpoint, the lower animals appears to angle a largeier density than man. Let us assuming the motive a little unity closely.

However resided the flame that became happiness

and wharry way tolon, burling a men to work the one and shou the other, the material laws of it all is bodily placears or bodily pair. This basis is very restricted: it is simply health, food, protection from wet and cold, the astimbetion of the sarrad instinct; or also the shannes of these things. Consequently, as far as real physical placears is most and, the may is not better off then the livite, amont is no far as the higher possible of his services system make him more sensitive to every kind of placears, but also it must be remarked, the every kind of placears, but also it must be remarked to every kind of placears, but also it must be remarked. The every kind of the process of pair. But then compared with the brute, low moch stronger are the passions accorded to him if what so immensurable difference there is in the depth and velocinance of his smotletts:—and yet, in the one case, as in the other, all to produce the same result in the und; namely, health, food, clothing, and so on.

The shief source of all this passion is that thought for what is absent and these, which, with man, accredient such a powerful influence upon all he does. It is this that is the seal origin of his muss, his hoppe his fears—antelions which affect him struch more deeply than could over be the case with those presents joys and sufferings to which the brevie is confined. In his powers of reflection, memory and foresight, mean powersen, as it were, a machine for condensing and storing up the phenuses and his acreves. But the brute his nothing of the kind; whenever it is in pain, it is as though it were suffering for the first time, even though the mans thing should have previously happened to it times even of number. If has no power of remusing up its fieldings. Hence he careless and

placid temper: how much it is to be excited (But in man reflection quasas in, with all the emotions to which is given rise; and taking up the acme element of pleasure and poin which are emesses; to him and the irrus, it developes his succeptibility to happlane and misery to each a deprece that, at one roomen's tis man is brought in an inelessé to a state of daight that may aren powe hish, at mosther to the dapths of dasputs and reioids.

If we earry our analysis a step farther, we shall find that, in order to increase has pleetare, man has imminically acided to the member and pressure of his neads, which in their original clade were not much more difficult to eatinfy then those of the brute. Essees increy in all its force: calcinote food, the use of tobacco and opious, opicitions liquous, fine clother and the throughd sed one things that he consider necessary to be anticones.

And above and beyond all this, there is a separate and psouliar source of pleasures, and consequently of pairs, which man has entailabled for himself, also as the results of taking his powers of reflection; and this complete him out of all proportions to its values, may, almost more than all his others interested yet begudanf mean anti-tices used the feeding of huntur and shame; if man worth, what he thirdle about the opinion other people have of him. Thiring a thousand furna, often very strange uses, this becames the goal of ulmost all the effects he makes this are not reveated in physical pleasure or pairs. It is trees that burdes the sources of pleasure which he has in summan with the britz, than he are pleasures of the mind we well. These admit of many gradations, from the most innocent trifling or the morest talk up to the highest intellectual achievaments; but there is the accompanying borodom to be not against them on the side of suffering Borndon is a form of suffering unknown to brutes, at any rate in their natural mate, it is easly the very elevers t of them, who show front tonors of it when they are domesticated; whereas in the case of man it has become a downing at sometime. The growd of miserable wretches whose one sim in his is to fill their porms but never to pet snything into their heads, offers a singular instance of this townest of boredon. Their washin bacomes a passessment by delivering them up to the missay of having nothing to do, for to assupe it, they will rash about an all directions, travelling here, there and everywhere. He somer do they arrive in a place then they are anxious to know what amusements it affords; just as though they were burgars sairing where they could receive a dole! Of a truth seed and borsdom are the two poles of human Mh. Finally, I may mention that an regards the sexual relation, man is committed to a peculiar arrangement which drives him obstitutely to choose one person This feeling grows, now and then, unto a more or less pastionate love," which is the summe of little pleasure and much suffering

It is, however, a weatherful throng that the more addition of throught should surve to raine such a vast and lofty structure of humans imprisons and misery; resting, too, on the same mercue basis of joy and

^{*)} here trusted this origins at length \$6 separal shapter of the averal volunts of any shad work,

acrow as non holds in corrows with the brets, and argoning him to much violant motions, to so many storms of passion, so much convulsion of so many storms of passion, so much convulsion of facing, that what has sufficed attacks wratten and may be read in the lines on his face. And yet, what all is hold, be has been strongling ultimately for the very same hings as the brets has attained, and with an incomparably weally expenditure of genetics and page.

But all this contributes to increase the measure of suffering in human life out of all proportion to its pleasures; and the pains of life are made touch weres for man by the fact that death is something very real to him. The trute five from death instinctively without really knowing what it is, and therefore without over contemplating it in the way natural to a man, who has this prospect always before his eyes. So that even if only a few brutes die a natural death, and most of them live only just long smough to transmit their species, and then, if not earlier, become the erer of some other aminal, - whilst man, on the other hand, messages to make so-called natural doubt the rule, to which, however, there are a good many exceptions,—the advantage is on the side of the brute, for the reason stated above. But the fact is that man attains the natural term of wages just as soldon as the brate; because the unnatural way III which he lives, and the strain of week and smotion, lend to a degeneration of the race; and so his goal is not often reached.

The brute is much more content with more existsure than man; the plant is whelly us; and man finds attisfaction in it just in proportion us be is dull

and obiase. Accordingly, the life of the brete sarries less of sorrow with it, but also has of joy, when sompured with the life of man; and while this may be traced, on the one mile to freedom from the torrestet of care and engicts, it is also due to the fact that hope, in any real arms, is unknown to the brute. It is thus deprived of any shore in that which gives us the most and the last of our joys and pleasures, the treated anticipation of a funpy feters, and the inspiriting play of phantasy, both of which we owe to our power of imagination. If the laute is free from cars, it is also, in this cence, without hope; in either man became its consciousness is tireited to the present moment, to what it one estually see before it. The brute is an embodiment of present impulses, and hence what comecute of fear and hope axist It its nature—and they do not so very for—arise only in relation to objects that he before it and within reach of those impoisse; whereas a man's reace of vision embraces the whole of his life and extends for into the part and the fotore

Following upon this, there is one respect in which brutes show real wirdom when compared with us—I mean their quiet, plend unjoyment of the present storest. The terrogalities of mind which this sectable to give them effect puts us to sharm for the many times we allow our thoughts suit our cases to make us restless and discontented. And, in fact, these pleasures of hope and antidoptation which I have been mentioning six not to be lead for mothing. The delight which a mean lose in hoping for and looking favorant to some openion middlebotton in a part of the

real posture alimbing to it mgoyul in ndvance. This is afterwards dedinable for the mass we look forward to anything the hose subinductive we find in it when it somes. But the hose subinductive me find in it when it somes. But the header subjected and therefore suffices no electricity in that the actual pleasure of the moment comes to it whele and migraplicative of the moments comes to it whele and migraplicative of the moments comes to it whele and migraphed. In the same way, too, ovil prosent upon tipe bruths only with its own intrinsic weight; whereas with us the fear of its owning effect makes the burden ten tipes more griserous.

It is just this characteristic way to which the brute gives itself up entirely to the present moment that contributes so much to the delight we take in our domestic pets. They are the present mement person!fied, and in some respects they make us feel the value of every hour that is free from trouble and annoyanos, which we with our thoughts and precesupations. mostly disregard. But man, that selfish and heartless. creature, mistures this quality of the brain to be more content then we are with more azistence, and often works it to such an extent that It allows the brute absolutely nothing more than more, bure life. The bird which was made so that it might rove over half the world, he shuts up into the space of a cubit foot, there to die a slow death in longing and trying for freedom : for in a case at does not sing for the platsure of it. And when I see how man missures the dos. his best friend; bow he ties up this intelligent animal with a chern I feel the despest sympathy with the brute and burning indignation against its master.

We shall see later that by taking a very high standpoint it is pussible to justify the sufferings of

manking). But the justification county apply 12 animals, whose sufferings, while in a great measure brought shout by mon, are often considerable even apart from their agoncy." And so we are forced to sak, Why and for what purpose does all this torreset and agony estied? There is nothing here to give the will paum, it is not free to deny itself and so obtain redemption. There is only one consideration that may serve to explain the sufferings of seconals. It is this: that the will to live, which underless the whole world of phenomens, must in their case ustufy its erawings by feeding upon strell. This it does by forming a gradation of phenomena, every one of which oxids at the expense of another. I have shown, however, that the espacity for suffering is ions in animals than in man. Any fersier explanation that may be given of their fate will be in the nature of hypothesia if not actually mythical in its character, and I may leave the reader to escended upon the matter for himself.

Brahma is said to have produced the world by a kind of fail or selentar, and in order in stone for his fully be is bound to remain in its hisself until he works out his redomption. As an account of the origin of things, that is admissabled. According to the detrines of Beddhams, then would cause into being as the result of sume inexpliciable destrotance in the heavenity cales of Riveaux, that blessed state obtained by explastion, which had undured so tong a time the abone taking place by a kind of fadality. This

¹ Of, Will sty Wife and Pertiling, vol. 5, y. 484,

explanation must be understood as having at bottom some moral bearing, although it is libratured by an exactly parallel theory in the domain of physical science, which places the origin of the sam in a primitive street of saist formal one knows not how. Sulmagnostly, by a rurius of month severy, the world became preducilly worm and worse-true of the physical orders as well-would it sengued the dismal aspect it weers to-day Excellent! The Graphs looked upon the world and the gods as the work of an inscrutable seconity. A penable explanation: we may be content with it until we can get a better Again, Ormuse and Abrimen are rival newers, contunually at wer. That is not bad. But that a God like Jehovah abould have created this world of missry and wee, out of pure caprice, and because he enjoyed doing it, and should then have elemped his hands in praise of his sum week, and declared averything to be very good-that will not do at all ! In its explanation of the origin of the world, Jacksian is inferior to any other form of religious dostrine professed by a civilized nation, and it is quite in bearing with this that it is the only one which presents no trace whatever of any below in the immurtality of the soul?

Even though Leibnite' contention, that this in the best of all possible worlds, were correct, that would not justify God to having created R. For he is the Creator not of the world only, but of possibility itself; and, therefore, he cought to have so ordered possibility as that at would admit of nomathing better.

³ See Process, vol.1, pp. 126 of eq.

There are two things which make it impossible to balieve that this would in the successful work of an all-wise, all-good, and, at the seese time, all-powerful Being, firstly, the minny which abounds in it swarywhere, and manually, the obvious importaction of the highest product man, who is a burisague of what he should be. These things council be reconciled with any such belief. On the conferry, they are just the facts which empace what I have been saving; they are our authority for viewing the world so the outsome of our own misdeals, and therefore, as something that had better not have been. Whilst, under the former hypethesis, they amount to a bitter accusation against the Greater, and supply material for sareare ; under the latter they form an indistment against our own nature, our own will, and teach us a leason of bemility. They lead on to see that, like the stilldren of a libertine, we some into the world with the bundes of any upon us; and that it is only through having continually to stone for this alm that our existence is so missrable, and that its and is death.

There is nothing more certain than the general truth that it is the generons are, of the servid which has produced the grievens are, of the servid 1 am not referring here to the physical connection between these two things lying in the realm of experisors, any meaning is mestaphysical. Accordingly, the solithing that reconciles use to the Old Testamant is the etcry of the Full. In any eyes, is the only metaphysical crash in that heads, even though it appears in the form of an allegory. There seems to use no hatter explanation of our existence than that it is the result of some false step, some use of which we are paying the passibly. It estimate refines from recommending the thoughtful resider a popular, but, at the same time, professed treatise on this subject by Clandins' which exhibits the consectedly positivately spirit of Christianity. It is untilled: Oursed is the ground for the sale.

Between the othics of the Greeks and the cilium of the Hindoon, there is a ginzing soutenet. In the one case (with the enception, it must be confessed, of Plaio), the object of othics is to enable a man to lead a happy life; it the other, it is to free and redeem him from life altogether—as is develop stated in the vary first words of the Sankhya Kersian.

Allied with the is the contrast between the Grack and the Christian idea of death. It is sirikingly presented in a visible form on a fine anique servo-plangus in the galleng at Herenco, which arities are valid, the whole serves of corresponse attending a wedging in assessed since, from the formal offer to the evening when Hymenta torch highes the happy couple locas. Compare with that the Christian coffin, draped in momental black and surmoutned with a eractin't How much significance there is in those two ways of finding cannot us death. Tay

pret, and Irread at Magazard, Roslar and Lancag Mr educate Wandshoot Manufactured to Wandshoot Mr. and Andreau Andreau

are opposed to each either, but each is right. The one prints to the effirmation of life will to live, which remains zero of life for all time, however rapidly its forms may change. The other, in the ayunded of arthring and death, points to the desaid of the will to live, to redemption from this world, the dunain of death and doubt. And it the question between the affirmation soul lite denied of the will to live, Christianity is in the last record right.

The contrast which the New Testament presents when compared with the eld, appording to the anticelestical view of the metter, is just that existing between my ethical system and the moral philasuphy of Europe. The Old Testament represents man as under the dominion of Law, in which, however, there is no redemption. The New Testament declares Law to have forled frees man from ste dominion. and it its stead preaches the krageous of grace, to be won by fath, love of neighbour and entire mentice of salf. This is the path of redemption from the avil of the world. The spent of the New Testament is undoubtedly sesstioner, how, ver your protestants and rationalists may swint at to mail their purpose Asceticism is the deaml of the well to leve, and the transition from the old Testument to the New, from the dominion of Law to that of Futh, from justification by works to redomption through the Mediator. from the demain of an and death to eternal life in Christ, means, when taken in its real muse, the transition from the merely mand virtues to the deptal of the will to live. My philosophy shows the meta-

^{*} Of Bearing to a Combiner of , life

physical formulation of justice and the love of mankind, and points to the gunt to which these virtues necessarily lead, if they are purchased in perfection. At the same time at mendal in confining that a rear mast turn has lack upon the world, and that its denial of the will to live in the way of redemption. If it herefore really at one with the spirit of the New Testament, which all other systems are couched in the spirit of the Old; that is to say, theoretically as well as practically, their result is Juckurm-more despotic theirs. In this sence, then, my doctain might be called the only true Chrestian philosophylowsaver paradoxical a statement this may result to people who takes reperficial views metered of panetraing to the heart of the matter

If you want a ands conspan to guide you through life, and to hansah all doubt as to the right way of looking at \$1, you cannot do better than accretion your-out to regard this world as a positionizer, a sort of panel colony, or ipoweripous, as the articles philosophera called \$6.2 Amongst the Christian Fathars, Origon, with prasesworthy surrogs, cook this view, which is further justified by cream edjective theories of life. I refer, not to my own philosophy alone, but to the wedoor of all apps, an expressed in Brahmanian and Buddhium, and in the sayings of Orcek philosophers like Empedocles and Pythugwess, as also by Creece, ill his remarks that the wave mes of old used to teach that we come into the work of old used to teach that we come into the work to pay the penalty of origing consumited in another state of crustages—

^{*} Augustus de curiete Do., L. el. e. 25.

doctrine which formed part of the initiation into the mystories. And Vanish-whom his contemporaries burned, floding that an easier task than to confirm him—puts the same thing; in a very furcible way. Men, he may, is no full of easy hind of mixing that, serve it not represent to the Christian religion. I should vertice to affirm that of out spirate anial at all they have peaced into ligance, form and as at all they have peaced into ligance, form and we now storeing for their arising? And true Christianity—mains the word in the right seaso—also regards our existence at the consequence of six and street.

If you accesses yourself to this view of life you will regulate your expectations accordingly, and omas to look upon all its diangreeable incidents, great and small, lie stifferings, its worries, its minery, as anything munual of rincipitar, may, you will find that wary-thing is as II abould be, in a world where mash of us pays the penalty of enistence in his own possiture way. Amongst the each of a penal cicinny is the scaled of these who form it; and if the reader is worthy of better scorpape, he will need no worther from me to remend him of what he has to put by with at present. If he has a similar better the common, or if he is a man of gavine, he will constituently field like state public princeser of state, consistency and leading to work if the galleys with common eximinals; send he will follow his example and try to incluse bissentil.

In general, however, it should be mid that this view of life will could us to contemplate the socalled imperfections of the great majority of men.

^{*} De administration entropy; dut is p 26

their mount and intullectual deficiencies and the resulting hase type of complements, without any empries, to any analysing of indignation; for we shall never cases to reflect where we see, and that his man about to are being connected and botts in sin, and living El atoms for it. That is what Christianity means in stocking of the sinful instruct of man.

Porsion's the word to all /2 Whatever folly men compile be their shortcommen or their vices what they may, let us survive forbessures; remembering that when these faults appear in others it is our follow and vioce that we behold. They are the exerterminus of humanity, to which we belong; whose faults, one and all, we share ; you even those very facile at which we now wax so indiguent, merely becomes they have not yet appeared in ourselves. They are foults that do not lls on the nurisce. But ther exist down there in the depths of our nature; and should envising call tham forth that will come and show themselvas just as WE DOW see them \$5 others. One man, it is true, may have faults that are absent in his fellow, and it n settlesp bed to latet mm est take bed qualities is in some cases very horse, for the difference of individuality between men and man passes all measure.

In fact, the convintion that the world and man is something that had butter not have been in of a kind to fill us with indeligence forwards one surchise. Nay, from this point of view, we might well consider the proper form of addings to be, not discusses, (if, main Herr, but may follow-outputs, food madorum, compagness de minimus? This may perhaps council stream,

^{2 &}quot;Operation," Act v. Bu &

but it ill in krausing with the fasts; if puts others in a right light; and it rentries us of that which is after all the most measurery thing in life—the telepanes, patience, regard, and leve of mighthous, of which everyone stands in mend, and which, therefore, every wan ovest to his follow:

THE VANITY OF EXISTENCE.

Ten varily finds expression in the whole way ... which things exist, in the infinite nature of Time and Space, as opposed to the finite nature of the individual in both; in the ever-passing present moment as the only mode of actual existence; in the interdependence and relativity of all things, in continual Becoming without over Being, in constant wishing and never being estisfied. If the long battle which forms the history of lefe, whose every effort is checked by difficulties, and stopped until they are aversome Time is that in which all things ness away, it is merely the form under which the will to live-the thing-in-likely and therefore imperabable—has revealed to it that ste effects are in vain, it is that agent by which at every moment all things so our hands become as nothing, and less any real value they

That which has been exists no mere, it exists as little as that which has useer been. But of averything that exists you meet any, in the sext normals, that it has been. Hence constiting of great importance now post is inferior to something of little importance now present, in that the letter is a reality, and related to the fenteer as something to nothing.

A map finds himself, to his great autocloloment.

suddanty criating, after thereands and thousands of years of non-excisions: In lives fer a little white; and then, again, coment as equally long period when lis must exist no meet. The least rabels against this, and Sale little to annot be true. The restart intellect cannot spacehile on such a subject without having a prescribence that Time is cometting ideal in its nature. This ideality of Time and Space is the key to every true equies of natesphysics, because it provides for quite another order of things than is to be met with in the domain of nature. This is why Knat is so great.

Of avery aveal in our life we can any only for our moment that it are for one effection is nor. Every evening we are poorer by a day. It might, perhaps, make at mant to see how capielly our short upon of time able away; of it were not that in the furthest depin of our boing we are seemely conscients of our share in the meaheastible spring of sternity, so that we not always hope to find like in it again. Considerations of the kind touched on above might,

Considerateous of the hind founded on above might, indeed, lead us to eashwee the build that the greatest widedon is to make the migorposed of the greatest surprises object of life; learness that is the only reality, all she being assembly the play of throught. On the other hand, such a comme might just as well be called the greatest felly: for that which in the most moment exists no more, and vanishes utterfy, like a dream can never be worth a minime office.

The whole foundation, on which our existence roots is the present—the over-flexing present. It lies, thus, in the very nature of our existence to take the form

of sonskart motions, and to offer no pumilibility of our over attaining that told for which we are always striving. We are like a man running downhill, who sanced keep on his legs unloss he runs on, and will invariably fall if he slope, or, again, like a pale balaned on the tap of see's finger, or like a planst, which would fall rate its mu the numeric is coased to hurry forward on its way. Unross in the sack of excitones.

In a world where all in unstable, and nought can andare, but is award onwards at once in the hurrying whirlpool of change, where a man, if he is to keep great at all, must always be edvancing and moving. like an acrobat on a rope—in such a world, happiness is inconssivable. How can It dwell where, as Flato says, continued Deceming and mover Borng is the sale form of existence? In the first place, a man never is happy, but spends ble whole life in straying after comething which he thinks will make him to; he saldom attains has goal, and when he does, it is only to be desappointed; he is mostly shipwracked as the end, and comes into harbour with maste and rigging gone And thee, it is all one whether he has been bappy or minerable; for his left was never anything more than a present moment always venishing , and now it mover.

At the same time it we a wonderful thing that, in site world of human beings as in that of animals in general, thus massful mittees matter by produced and hept up by the agency of two simple impulses hunger and the sexual imitizet, sided a little, perhaps by the influence of foreduce, but by sething the; and that, in the theater of life, there suffices to form the primum mobile of how complicated a machinery, acting in motion how strange and varied a score?

On inching a littile closur, we find that inorganic maker presents a sumstant conflict between chamical forces, which washeally worked dissolution; and on the other hand, that expanic his in imposable without openinal change of maker, and casend axis if it does not reactive perpetual help from without. This is the realm of fanality, and its opposite would be an inglect excitence, appeared to no attack from without, and useding orbiding to empore it; it discretes it, the realm of eleman peans, ober psychose elemans of eleman peans, ober psychose elemans of eleman peans, ober psychose elemans the commant note of the Pletonic philicouply. It is must be dominant note of the Pletonic philicouply. It is must not be state as this that the denial of the will to live opens up the way.

The scans of one lefe are leke plotness done in rough meads. Leveled at close, they produce no sifest. There is nothing hanning to be found up that, unless you need some dustance off. So, to gam supthing we have longed for is only to discover how walk and empty it se, and even though we are always living in expectation of botter things, at the same time we often repeats and long to have the past back agam. We look upon the present an eventhing to be put up with while it leads, and serving only as the way towards over gund. Hearts more people, if they glance back when they mans in the end of He, will find that all along they have been living ad interior. I show will be surprised to find that the very thing they disregarded and lat slip by unemproped was just

the life in the expectation of which they perced all their time. Of how many a new may it not be said that hope made a fool of him until he danced into the arms of death!

Then again, how insatishile a measure is man. Every satisfaction he attains lays the scota of some new desirs, so that there is no and to the wishes of each undividual will. And why is this? The real reason is simply that, taken in itself, Wiff is the lard of all worlds: awaything belongs to it, and therefore no one single thing am over give it estenfaction, has only the whole, which is endices. For all that, is must rose our sympathy to think how very little the Will, this lord of the world, really gots when it taken the firm of an individual; usually only just sneagh to keep the body together. This is why man is so very meserable.

Lafe presents itself obveily as a test.—the test, I mean, of sabmating at all, agreer as wis. If this is accomplished, life is a burden, and then there corne its second test of doing nomedberg with that which has been won—of weighing off bowdens, which, like a bird of prey, hower over us, randy so fall whenver it sees a life swoure from need. This first bunk is to win something, the second, to busint the feeding that it has been wen, otherwise it is a burden.

Human life means be some kired of unistake. The truth of this will be unflicently obvious if we only remember that mean is a compound of meads and unconstition hard to mixing; and that sever when they are estimated all he obtains us a state of parallements, where nothing remains to him but alternations on the

borwion. This is direct proof that existence has no real value in itself; for who is inscalant but the feeling of the amptimum of life? If life—the graving for which is the vary number of our being—were posessed of any positive intrinsis value, there would be no such thing as become at all: more existence would existing us intent; and we should much for nothing.

But as it is, we take me delight in existence except when we are exerging for cometing; and then distance and difficulties to be overcome make our goal look as though it would eatinfy we—as: Ulusion which wands when we reach it; or else when we are compiled with some purely intellectual interest—where in reality we have excepted forth from life to look upon it from the solution, useds after the manner of spectators at a play. And oven ceaseal pleasure itself means subtaing but a straggle and aspiration, one-

upon it from the sounds, meds after the manner of appealators at a play. And even sensant pleasure itself means nothing but a straggle and aspiration, canaing the moment its aim is attained. Whimever we are not compled it one of these ways, but cast upon existence itself, its vais and worthlam nature in brought home to so; and this is what we mean by borodom. The head-rimer after what is strange and

uncommon—an issue and immedicable tendency of homen nature—above how glid we are at any in-

terruption of that animal season of affairs which is as very bedieva.

That this most purious manifestation of the will to live, the human organisms, with the examing and

That item more proves measurements or the will be live, the human engagemen, with the exemple acceptance working of the mentionery, must full to dust and spield up therefor and all its strivings to extinction—this is the native way in which Roture, who is a laway so tetes and amores in what has many presidents the

whole strength of this will as in its very segmen barren and expredicite. Were it of any value in tentf, anything excenditional and chalate, it could

not thus end in more authing.

If we turn from contemplating the world as a whole, and, in particular, the generations of men as they live their little hour of mock-existence and then are greent away in rapid macanism; if we jurn from this, and look at life in he small details, as presented. say, he a secondy, how ridiculous is all second It us like a drop of welve seen through a misroscope, a

single drop teeming with seymonic; or a speak of shows full of motor invisible to the saled eye. How we laugh as they bustle about so eagurly, and struggle with one another in so ting a mann (And whether here, or in the little even of human life, this tarrible antivity produces a comic effect.

It is only in the microscope that our life looks so big. It is an indertable point, drawn out and marni-

fed by the powerful imees of Time and Space.

он видеия.

As for so I know, none but the vetacion of mone theistin, that is to say, Jewish religious, look upon guidde as a crime. This is all the more striking. inserenth as neither in the Old nor in the New Testament is there to be found any prohibition or positive disapproval of it; so that religious tossbers are forced to been their confirmation of suicide on philosophical grounds of their own invention. These are so very had that writers of this kind endearous to make up for the weakness of their areaments by the strong terms in which they express their abhorrance of the practice; in other words, they desialm against it, They tell us that ericide in the greatest piece of sowardion; that only a madman could be wallty of it. and other insightities of the same kind; or she they make the populational research that estaids in wrong, when it is quite obvious that there is nothing in the world to which every man has a more treatmileble title than to his own life and passen.

Stainlin, no I have said, is solumily concurred a crime unit or rime unital, superiorly under the valgar blyotry that prevails in Regional, in followed by an exponentiations buried and the missare of the mean's property; and for that mustan, in a case of said-tio, the jury almost always bring in a worldst of immunity Now let the reader's own moral feelings decide as to whather or not minide in a criminal set. Think of the impression that would be undo upon you by the naws that some one you know bull compatited the grims. say, of murder or thell, or been guilty of some set of greatty or deception, and compare it with your feelings when you hear that he has met a voluntary death. While in the one map a lively smee of judgmetion and extreme recentment will be amound, and you will call loudly for punushment or revenge, in the other you will be moved to grief and sympathy; and mungled with your thoughts will be admiration for his courage, rather than the moral disappreval which follows upon a wicked setton. Who hee not had sequeintennes, friends, relations, who of their own free will have left ilds world; and are them to be thought of with horror as criminals? Most completically Not I am rather of opinion that the clongy should be shallenged to explain what right they have to se into the pulpit. or take up their pees, and stemp on a crims an agion which many mee whom we hold in affertion and honour have committed; and to refuse an honourable burial to those who relinquish thus world voluntarily They have no biblical authority to boast of, as justifying their condemnation of entends, may, not area thy philosophical arguments that will hold water; and it must be understood that it is arguments we want, and that we will not be put off with mure phrases or words of abuse. If the original law forbids spicide, that is not an argument value in the Church; and buildes, the prohibition is ridiculous; for what penalty can frichten a men who is not afraid of death Healf? If the law punishes people for trying to commit soleids, it is puneshing the want of skill that makes the attempt a failure.

The ancients, mersower, were very for from regardme the metter in that light. Pliny mys: Life is not so desirable at throws up to be predented at most post. Whoever you ere, you are more to die, even though your life has been full of abunination and oring. The chart of all remedies for a troubled mind is the feeling that among the blemenge which Nature gives to man there is none greater their an opportune douth? and the best of at in that every one are avail himself of it! And cleawhere the eager writer declares ; Not even to God are all through poundle; for he could not compass his own death, if he willed to die, and yet in all the mineries of our earthly by this is the best of his gifts to man." Noy, in Mamba and on the rale of Coos, the man, who sould give valid reasons for rehuntishing his life was handed the enp of hemlock by the magazinate, and that, ten, in public. And in anglest times how many become and wise man died a voluntary death. Atietotle,4 it is true, declared micide to be an offence against the State, although not against the person; but in Stohaus' expecition of the Peripatetes philosophy there is the following remark: The good man should flee but when his

declares that if we had any certainty of being annihilated by it, doubt would be infinitely preferable to the world us it in. But there like the rule /

The reasons advanced against spirite by the clergy of monotheletic, that is to say, Jawish religions, and by those philosophers who adapt themselves thereto, are work cophisms which can easily be refuted. The most thorough-going refutation of them is given by Hume in his Sesay on Suicide. This did not appear until after his death, when it was immediately suppressed, owing to the soundalous bigoiny and outrageous escieniastical tyrunny that prevailed in England; and brone only a very few copies of it were cold under cover of secrety and at a high price. This and another treatise by that great man have come to us from Basis, and we may be thankful for the reprint . It is a great diagram ill the English nation that a purely philosophical treaties. which proceeding from one of the first thinkers and writers in England, aimed at refleting the engrent arguments against spicide by the leght of cold reason, should be formed to smeak about in that country as though it were some rescally production, until at last it found refuge on the Continent. At the same time It shows what a good conscious the Church has in euch matters.

In my chief work I have explained the only valid reason existing against minish on the sours of morality. It is this; that micils through the attala-

ment of the highest moral aim by the fact that, for a real release from this world of salmry, it substitutes one that is merely apparent? But from a michely ha a oritm is a far any, and it is us a crime shat the clargy of Cirustendom with us he required suicide

The immost kernel of Christianity is the truth that agiftring—the Orea—is the real and and object of life. Hence Christianity condenses existed as thwaring this end, whalst the serious world, taking a lower point of view, held it in approval, say, in honour But if that in to be accounted a valid for enon against suicide it involves the recognition of excetasism, that is to say, it is valid only from a much higher school standpoint thus has over been adopted by moral philosophors in Europe. If we absend in that high standpoint, there is no tenable masen laft, on the soone of morathry, for condensing suicide. The extraordinary energy and evel with which the clergy of morathrists whighes attack suicide is est apported either by any general sink high the billing of the proposing of the Bubble or by my con-

¹ Franchister's Male: Subsymminator reviews to Dis Will on Falls and Franchisop, set 1, a fit, where the resider may find this satus argument stand at somewhat greater length. According to Schrigerthiaer, merid franchise—the highest shimed attack in the best attacked, sectorly as me completion assertion of this wall. For it is in Sector from the photomera, but from this sufficient of this wall. For it is in Sector from the photomera, but from this military of bids, that this demand operation. Whose is unto destroys his constroince so as Dischwidsel, his or and by any mean destroying his will to hive. On the configuracy, his would him in itself in social do not with minimization in Dissuradi. A second matter in will appare the present of mean-administration.

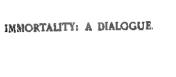

aiderestions of weight; on that it looks on though they must have acone sorred reasons for their centration. May us not be this—that the voluntary surreander of life is a had compliment for him who said that all things come newy good? If it this is on, is offers another instance of the cross optimism of these religions,—descenting suicide to sumpe being demounced by it.

Is will generally be found that, as soon as the terrors of life reach the porat at which they copweigh the terrors of life reach the porat at which they copweigh the terrors of duals, a sam will put as each to his life. But the terrors of duals offer considerable resistance; they stand the a summal at the gate leading out of this world. Earthape there is no man after who would not have already put as each to his lafe, if thus sud had been of a purely segative character, a sudden stoppage of entered and the summar. There is consolving positive about it; it is the desiruction of the body; and a man shrunks from that, beanses has body is the manifestation of the will to true.

However, the struggle with shat central is, as a rule, not so hard as it may neen from a long way off, mainly in consequence of the astequents between the ills of the body and the fills of the mind. If we are in great bodily pain, or the juin buts a long time, we become indifferent to other trumbles; all we think about is to get well. In the more way great mental coffering makes in immunchle to bodily pain; we despise it; may, if it should outhweigh the other, it destrote our thoughts, and we welcome it as a pause in named ordinary. It is this fooling that makes suiside energ, the the bodily pain that maponypates it loses all algorifismos in the sym of our who in topically by an access of mental sufficient. This is especially writen in the case of those who are skiven to suicide by some purely morthic and compgement in the survey. No specul effort to everenmen that feelings is naturally and do such people requires to be worked up in order to take the step; but as more us the keeper into whose charge they are given hereout them for a scools of militate they euclide herito their first as a cold.

When, in some draudful and glandly draum, we reach the moment of greatest horse; is awaken ma; thereby busishing all the bideons shapes that were born of the cight, and life is a decam; when the moment of greatest however compute us to break it off, the same thirm homeon.

Soldde may also be regarded as an experiment—a question which sees pute to littare, trying to force her to an enterer. The question is this "Ratt thange will death produce in a man's excistence send in his imnight into the neture of things? I is in a cleany experiment to make; for it involves the destruction of the very consourance which puts the question and awaits the

DESCRIPTION A DIALOGUE.

THRASTERACHOS-PRINALISTEES.

Throughneshes Tell use now, on one word, what shall I be after my death? And mend you be obtaand product.

Philaisther, Everything and nothing,

Throughnooles. I thought so I gave you a problum, and you solve it by a contradiction. That's a very stale trick.

Philolothes. Yes, but you enion termacenductal quasilons, and you expect us to enever them in language that is only mode for insensent knowledge. I've no wonder that a contradiction cames.

Thrasymachon What do you mean by transcendental questions and immediate knowledge? I've

³ Translator's 2040. The word immerciating—Unstart-balaria—done not cover to the original; not revealed up in this stand application, that is place in this property controllator. heard these expressions before, of course; they are not new to me. The Professor was food of using them, but only as predicates of the Daity, and he never talked of anything sim; which was all quite right and proper. He argued them: if the Duity was in the world itself, he was immensed; if he was somewhere options it, he was transmittant. Nothing noted be cleaver and more obvious! You know where you were But this Kastian rigments won't do any more it's antiqueted and no longer applicable to modern ideas. Why, we've had a whole row of emment men. In the metropoles of German learning-

Philadeles (mide). Certeen bumbug, he means. Througsmoder.—The mighty Schleiermasher, for in-riance, and that gignatic intellect, Hagel; and at this time of day we've abandoned that accessors. I should rather my we're so far beyond it that we mu't put up with it any more. What's the eas of it then ! What does it all meen ?

Philalethia Transcendental knowledge is knowledge which passes beyond the bounds of possible experiones, and strives to determine the nature of things at they are in themselves. Immercul knowledge, on the other hand, is knowledge which confines itself intirely within these bounds, so that it counct apply to anything but actual phonomens. As far as you are an individual, doub will be the and of you. But your individuality is not your tree and issued, bung; may, only the outward manifestation of it. It is not the thing-in-itself, but only the phenomenan presented III the form of time; and therefore with a beginning and an end. But your real being langua anither time

nor beginging our only our yet the limits of any given individual. It is overywhere mental in every individual; and no individual our print spart from it. So when death penses, on the con hand you are annihilated as an imbedded; on the other you are 4nd remain everything. That's what I mount when I said that at death you would be everything and nothing. It is difficult to find a more precise answer to your excetom and at the same time be brief. The number is contradictory, I admit; but it is so sireply bemuse your life in un time, and the immortal part of you in sternity. You may put the matter thus. Your immortal part is eventhing that does not last in time and yet is indestructible; but there you have another amtradiction! You ose what happens by trying to bring the transmodestal within the limits of immanent knowledge. It is to some sort doing violence to the latter by misuning it for ends it was DAYAR MAKES to ANYE

Throsymaches Look here, I she'n't give twopence for your immortable unless I'm to comain an individual.

Phildiethe. Well, perhaps I may be able to mainly you on this point. Suppose I gearantee that allodeth you shall remain an individual, but only or condition that you that spend three mostle of complets uncountedpasses.

Throughnaston I shall have no objection to that.

Philosopher But remember, if people are empletely

unconsticts, they take no noment of time. So, when you are deed, it's all the same to you whether three months you in the world of oppositions, or too

thousand years. In the sum case as in the other, it is eimply a matter of balloving what is told you what you awake. So far, thus, you am affect to be indifferent whather it in three months or han thousand years that pass before you recover your individuality. Three-products. Ten if it comes in that, I suppose

Throughout Res, if it common to that, I suppose
you're right.

Philabether, And if by chunch, after those ten thousand years have gone by, me one ever thinks of swaking you, I thusy it would be negrest indicrium. You would have become quite assumptioned to non-existence after so long a spall of it—following upon much a wary few years of life. As any rate you may be sure you would be perfectly ignorant of the whole thing. Further, if you know that the mysterious power which knope you in your present state of life had never once ceased in those len thousand years to bring forth other phanomens like yourself, and so motion them with life, it would fully console you.

Thrasymackon Indeed! So you think you're quietly going to do me out of my individuality with all this fine talk. But I'm op to your tricks. I tell you. I won't axist anches I saw have my individuality. I'm not going to be yet off with 'mysterious powers,' and what you call 'phenomens.' I oun't do without my individuality, and I wan't give it up.

Philoichles. You mean, I suppose, that your individuality is such a delightful thing—so episatid, so perfect, and beyond crumpars—that you can't imagine anything better. Aren't you ready to unhange your present state for one which, if we can judge by what is hold us, may joundly be superint and nathe confurshed.

Throughnesies. Dun't you see that my individuality, be it what It may, is my very mil! To see it is the most important thing in the world,

For Got in Got and I am I.

I want to exist, I. I. That's the wain thing. I don't care about an emistence which has to be proved to be mire, before I can believe it.

Philalches, Think what you're doing! When you my I, I, I want to exist, it is not you alone that mys this. Everything says it, absolutely everything that has the familiary trace of consciousness. It follows. than, that this during of yours is just the part of you that is not individual—the part that is sommon to all things without distinction. It is the cry, not of the individual but of existence steelf; it is the intrinsic alamont in everything that exists, may, it is the onuse of anything existing at all. This desire orayes for and so is satisfied with, sothing less than existence in general-not any definite individual azisteme. No! that is not its aim. It seems to be so only because this desire—this Will-attains consciousness only in the individual, and therefore both as though it were schoursed with nothing but the individual. There lies the illusion—as illusion, it is true, in which the individual is held fact : but, if he reflects, he can break the fetters and get himself time. It is only indirectly. I way, that the individual has this violent waving for existence. It is she Wall to Line which is the real and direct aspirant—altho and identical fit all thisses. Since, then, existence is the free work, now, the more reflection of the will, where existence is, there, too, must untirination in existence itself, so far, I mann, so that which never roots, but present forward eternally, can ever find any estimation at all. The will is careless of the individual: the individual is not its business; although, as I have said, this seems as af at were besome the individual has un direct apageionmoss of will except in himself. The effect of thus us to make the individual careful to mainten his own existence; and if this were not so, there would be no surety for the preservation of the species. From all this it is clear that individuality is not a form of perfection, but ruther of Havitation; and so to be freed from it is not loss but min Trouble request so more about the matter. Once thoroughly recognise what you are, what your existence really is, samely, the universal will to live, and the whole question will seem to you childish, and most ridiculous!

Thronomaches Tow're children remaid, and most ridiculous, like all philosophers t and if a man of my age lets himself so for a questor-of-an-hour's talk with anch fools it is only because it senues me and power the time. I've more important business to attend to, so Good-bee-

FURTHER PSYCHULOGICAL OBSERVATIONS.

Three II an uncorractors propriety in the way is which, in all Baropean languages, the word present a commonly used to deaste a homes bear. The ran meaning of persons is a seast, such as select were accustomed to wear on the assistant etags; and it is guile true that no one shows himself as he is, but wasrs his mask sail plays his part. Indeed, the whole to us social averagements may be littened to a perpetual comedy; and this is why a man who is worth anything finds society so insight, while a blackboad is quite at home in \$2.

Reason deserves to be ealled a prophety for in thorung na the accordance and effect of our notions in this present, done is not tall on wheat the future will be ! This is presently why resons in seek no a reallest power of metanine is measured when we are possessed by stans been pussion, sums fit of empre, some correlated by stans been pussion, sums fit of empre, some correlated interest that will lend us to do things whereof we must presently request.

Eleval access from the heart; sentempt from the beed; and mather fasting is quite within our control. For we cannot alike our heart; its line is determined by motivus; and our head deals with objective facts

46.

and applies to these rules which are immedable. Any given individual is the union of a particular heart with a particular hand.

Hatred and contample are dismetrically opposed and multiply exclusive. There are even not a few came where haired of a passon is rested in nothing but forced esteem for his qualities. And hospice, if a man sale out to hate all the minerable constures he mayin. he will not have much secure left for anything else : whereas he can decries them, one and all with the greatest uses. True genuine contempt to just the reverse of tros, graveies pride; it keeps quite quite and gives no rign of its existence. For if a man shows that he despises you, he signifies at least this much regard for you, that he wants to let you know how little I'll appreciates you; and his wish is dictated by hatred, which essent exist with real contempt. On the contrary, if it is genuine, et is simply the convintion that the object of it is a man of no value at all. Contempt is not incompatible with inchloses and kindly treatment, and for the mile of one's own peace and enfety this should not be emitted; it will prevent irritation : and there is no one who cannot do herm if be is record to st. But if this pure, cold, sizours nontempt ever shows shall it will be met with the most translant haterd; for the despised purson is not in a position to finish protomot with its own, weapons

Melantholy is a very different thing from had huncors, and of the two it is not nearly so for removed from a gay and happy temperament. Melantholy attracts, white had huncour regals. Hypochondria is a species of formant which not only makes so mercanomically ocus with the things of the present; not only fills us with geomedian anxiety on the score of fintness minimum sationly of our own manufacture, but also loaded to usuantiad polyrepresent for what we have done in the past.

Hypochondria shows itself in a perpetual hunting after things that wax and sussey, and then brooding over them. The cause of it is an isward morbid discontent, when so-emisting with a naturally regulars temperament. In their actions fays, this discontent and know surrest lead to outdie,

Any topicions, however trivial, that comes disagreeable motion, heaves an effer-affect in our oring, which, for the time is lasts, powers our exiting a clear objective view of the things about on, and tinges all our thoughts, just as a small object bett close to the wy limits and distorts our field of vision.

What makes people hard-heavied in this, that each man has, or fancies he hat, as susph as he can bear in his own troubles. Here if a man suddauly finds himself if an assumably heapty position, it will in most cases result in his being sympathetic and kind. But if he has never bean in any other than a happy portion, or this becames his personant risks, the effect of it is offer control him from suffering that he is immediate of feeling any more sympathy with it. Be it in that the poor often above to small ten many to had, than the risks

At sincer it seems on though we both sturing and did not want the mane thing, and felt at one glad and appry shout it. For instance, if an ages glad and appry shout it. For instance, if an ages fard date we are going to be gut to a decisive test about anything on which it would be a gener advantage to us to come off visitoriess, we shall be accisive for it to take plane at once, and at the same sime we shall irremble ill the thought of its approach. And if, in the resulting, we hear that, for once in a way, the date has been postposed, we shall superione a feeling both of planears and of amonymum, for the owns is disapprinting, but neverthelms it affects us momentary relact. It is just the same thing if we are expecting some important letter energing a definite decision, and it falls to arrays.

In such cases there are really two different motiver as work in m; the stronger but more distant of the two being the desire to estand the test and to have the chansions given in our favour; and the weaker, which founds no more meally, the wish to be last for the present in passes and quiest, and accordingly in further enjoyment of the advantage which as my rate actables to a state of hopeful uncertainty, compared with the possibility that the term may be suffrequently.

In my head there is a permanent apportion-party; and whenever I take any object come to any desistent-though I may have given the matter matery consideration—it offerwayls attacks what I have done, without, however, being much time occupantly to the right. This is, I suppose, only a furn of rechification on the part of the spirit of surviving; but ill often re-

proaches me when I do not departs it. The store thing no doubt happens to many others as well; for where is the man who can help thinking that, after all, it were better not to have done something that III dld with every hope of accesses --

Quid iam dissire puls granque ut to Ornales was pusselest releger perceti F

Why is it that common is an expression of contempt? and that necessary, assessment, astinguished, denote approbation? Why is everything that is common nonlemptable?

Common in the original meaning denotes that which is piculiar to all nows we above quality by this whole aportes, and thosefore an above the part of its matura abcordingly, if an individual possesses on qualities boyond those which attach to menkind on general, it is a possesse man. Onlineary is a mesh militar word, and refer rather to medicate abaracter; whereas converse, has more of a moral application.

What raise one a contain have that is not a whit different from melbone of the track! Mallions, to I may I may an infiniteless of members which, containy after century, in move-spring flow, Nature south bubbling up from her inextensible springs; as guerous with these me the modific with the assland sparks that by ground his movil.

Il is obviously quate right that a creature which I has no qualities except those of the species should? have to confine its obtion to me existence saturally? within the limits of the species, and live a life conditioned by these limits.

In various passages of my works, I have argued that whilst a lower animal juminance mothing more than the generic absention of its especies man is the only being which can bey claim to possess an individual character. That is most man this individual character posses to very little in reality; and they may be almost all ranged nodes cariain element: es next das appears. Their thoughts and desires, the their fines, are shose of the species, or, or any cute, those of the class to which they belong; and concerdingly they are of a trivial, every-day, common character, and exist by the thousand. You can usually tell information what they are Rheely to do and my. They have no special stamp or mark to distinguish them; they are like manufactured record, all of a size,

If, then, their mature is metroed in that of the species, how shall their axistence go beyond at 7. The curse of valgarity pain mess on a par with the lower animals, by allowing them some but a generic anture, a generic form of exvisions.

Anything that is high or great or eachle must then, as a matter of course, and by fire very nature, stand alone in a world where we better expression can be found to denote what is least and contemptible than that which I have mentioned as in general use, namely, consessors.

Will, as the thing-in-limit; in the foundation of all * Orondynthese for Milk, y 40; Witt do Wills and Virstress, vol. 1, 1, 188. being, it is part and purpl of owny constart, and the permanent element in overything. Will, then, is that which we possess in opposing with all man, nay, with all animals, and even with lower forms of sxistence; and in so far we are akin to overething -- so far, that u, as everything is fitled to overflowing with will. On the other hand, that which places one being over another, and sets differences between man and man, is Intellect and knowledge; therefore in every manifestation of self we should as far as possible, give play to the intellect alone, for, as we have seen, the will us the semmon part of us. Every violent exhibition of will is common and valuer : in other words, it reduces ns to the level of the species, and makes us & mure type and szample of st., in that it is just the character of the species that we are showing. So every fit of anger is something assures -every unrestrained display of joy, or of hate, or feer-in short, every form of smotion, in other words, every movement of the will, if it is so strong so decidedly to outweigh the intellegtual element in conscionmen, and to make the man appear as a being that wells cuther than knows. In giving way to emotion of this violent kind, the

In giving way to emotion of this violant kind, the greatest genuive pata hamanff on a level with the commentest sun of earth. Contently, if a man desired to be absolutely succession, in other ways, great, he should heave allow his consciousness to 55 taken possession of and deminispid by the seveness of his will, however much he may be selicated thereto. For example, he ment be able to observe that other people are budly disposed towards him without fealing any hadred towards than kinesiff; may, there is

an atter sign of a great small these that it refram he notice among age and insulting expressions, but straight way agen box the description countlass other mintakes, to the defective knowledge of the speaker, and on merely change to without feeling them. This is the meaning of that remark of distrain, that nothing is more unworkey of a man show to feel it be seen that he is one—at measure described of which the country of a man three of which we down the is one—at measure described of which the seen that he is one—at measure described.

And even so the drame, which so the populiar province of the passions and emotions, it is easy for them. to appear common and velger And this is specially observable in the works of the French tragic writers, who set no other aim before themselves but the delineation of the pessions, and by indulging at one moment in a vapourous kied of pathos which makes them ridientous, at another to epogrammatic Whiticians, andsavour to conceat the valgarity of their subject. I remember seeing the colebrated Medemonalle Rachel as Maris Steart; and when she beent out in fury against Elisabeth-shough she ded it very wail-I could not bely thinking of a weaterwomen. She played the figni parting to such a way as to daprive it of all true tempe funling, of which, indeed, the French have no notion at all. The man part was incomparably better played by the Italian Ristors, and, in fact, the Stalmer mature, though in many respects very defibrant from the German, shares its approximation for what is doop, serious, and true in Art : herein opposed to the Franch, which everywhere betrays that it grammes more of this feeling whatever.

The noble, in office words, the uncurance, element

in the drame—may, what is sublime in it—is not reached until the installed at set to week, as opposed to the will, notil it takem a free flight over all those passionate movements of the will, and makes them the which of its contemplation. Shakatopeans, in particular, shows that this is his general method, more appearably in Hamlat. And only when intellect rises to the point where the westly of all effect is manifact, and the will proceeds to un not of self-supulment, is the drama tragic in the laws come of the word: It is then that it reaches its highest aim is becoming really withins.

Every men takes the limits of his own field of rision for the limits of the world. This is an error of the limitest as inscribable so that ever of the syswhich list us fancy that on the borison heaven and earth mest. This explains many things, and smong them the fact that everyone measures us with his own standard—generally obset on long on a tailor's tape, and we have to put up with it; on also that no one will allow us to be talker than himself—a capporition which is once for all takem for granted.

There is me doubt that many a man even his good fortune in life solely to the circumstance that he has a pleasant way of mailing, and so win the heart in his favour.

However, the heart would do better in he careful, and to remember what Hamlet put down in his tablets —Act one may make and make and he a willerin. Everything that is really fundamental in a man, and therefore general, works, as mad, essentiously; in this respect like the power of manne. That which has passed through the domain of sometimeness is thereby transformed subs on ideas or picture; and so, if it comes to be willowed, it is only an idea or picture, which passes frees, one person to another.

Accordingly any quality of mind or obsecter that is growine and leading in enquently encountries; and it is only when unconsecurity brought jets play that it makes a profound impression. If any like quality is countiously exercised, it means that it has been worked up, it becomes intensional, and therefore a matter of affectation; in other words of deception.

If a man does a thing unconscisoidy, it easts him no trouble, but if he tries to do it by saiding housels he fails. This applies to she origes of those fundamental ideas which form the pith and marrow of all gausine work. Only that whech is immede ignessine and will hold water, and every man who wants to achieve something, whether in pencional tile, in literature, or in art, mose follows the region embless? Amonthing the contractions of the contraction of the

Men of very great capacity well, as a rule, find the company of very stopial people prefurable to that of the common run; for the same reason that the tyrant and the mob, the greadlather und the grandshildren, are natural allon.

That Bue of Ovidle.

Propaga and spiritual animals often frame,

out be applied in its term physical mean to the lower

animals alone; but in a metapherical and spiritual some it is, shad true of searty all near as well. All their plans and prijests are metapad in the desire of physical enjoyment, physical well-being. They may, indeed, have personal interests, often embracing a vary varied sphere; but still these latter nearests their proclams entirely from the relation of which they stand in the forester. This is not only proved by their manner of life and the things they say, but if a ven shows itself in the way they look, the expression of their physiogeomy, their gut and gestioulations.

Everything about them order out: 66 terrours protect.

It is not to them, it is only to the coller and more highly endowed materne-more who really think and look about them in the world, and form exceptional specimens of humanity—that the cent lines are applicable:

funda no

Or homers authors dated endverges travi Famil at aventus of school inflore vedice.

Mo one knows what aspectities the desire and suffering he has in himself, and nonething comes to rouns that no activity; just in me a pend of shill waker, I judg share like a surrour, there is no sign of the roar and thunder with which it is ean keep from the precipion, and yet remain what it may or again, rise high in the sir as a fountain. When water is as odd as los, you can have no sides of the histonia wanth constanted as it.

Why in it that, in spite of all the mirrors in the world, so one really knows what he looks like !

A man may call to mind the face of his friend, but not his own. Here, then, in an initial difficulty in the way of applying the maxim, Excertingal/.

This is partly, no doubt, to be explained by the fact that it is physically impossible for a man to see himself in the glass strongs with face immed straight towards it and perfectly motionless, where the expression of the eye, which counts for so much, and really gives its whole character to the face, is to a great extent lost. But co-acteting with this physical impossibility there seems to me to be an ethical impossibility of an avalogous enture, which produces the same effect. A man exact look poor his own reflection as though the purson presented there were a stranger to him , and yet then is necessary if he is to take an objective view. In the last resert, an objectave view means a deep-rooted feel-or on the part of the individual, as a moral being that that which he is contemplating is not armself, 1 and unless he can take this point of view he will not one things in a really true light, which is nossible only if he is alive to their notical defects, exactly as they are. Instead of that, when a man sees himself in the glass, semething out of his own egointic nature whapers to him to take care to remember that it is no alreager, but himself. that he is looking at; and this operator as a noti the tengers, and prevente has taking an objective view It seems, indeed, as it without the leaven of a grain of malice, such a view were impossible.

According as a man's secural energy is exerted or *CE directionalisms for Ethic at 225

ben brode on willia mid at sumps ald live baxales petty and fleeting that nothing our promitly happen over which it is worth his while to spend emotion . that nothing really matters, whether it is pleasure or rithm or even fame, and that in whatever way a man may have failed he cannot have lost much -ot, on the other hand lafe will mean so tong, so important. ng all in all, so momentum and so full of difficulty, that we have to plange into it with our whole soul if we are to obtain a abare of sta goods, make more of its prises, and carry out our plans. Thus latter in the immanent and common view of late, it is what Graden means when he speake of the certons way of looking i things-tomer may de serce al vivar The former is the transcendental view, which is well expressed in Quid's non set tents-it se not worth so much trouble , stall better, however, by Plato's remark that nothing in homes office in worth any great admitte- over to the brokenstine after fort poyahus graves This condition of mind arises when intellect has got the upper band in the domain of congrousness, where, freed from the more service of the will, it looks upon the phonomens of his objectively, and so cannot fail to gain a slear maight into its vain and fittle character. But in the other condition of mind, will predominates; and the intellect exists only to light it on its way to the attainment of its desires A man is great or small according as he leans to the

A men is greek or small ecoording as he teams to the

People of very brilliant shiftly think little of admitting their copies and weaknesses, or of letting others are them. They look upon them as something for which they have duly pail; and antesed of fancying that these weaks, was a degree to their they consider they are doing them as become. This is superially the man when the across are of the kind that hang tegether with their qualities—conditions you guther naw—or, so Googe Sand said, for diffusion of sec verse;

Contrarily, there are people of good character and irrepreschable isolableaud especity, who, far from admitting the few likels weaknesses they have, nomes them with care, and show themselves very manifive to any suggestion of their estatement; and thu just because their whole specific consets in heigh free from error and infirmity. If these people are found to have done capthing wrong, their reputation immediately miffers.

With people of emby medium to shally unclasty in marts homesty; has with those who possess great latent it is hypocrays. Hance it is just as becoming in the latter to make no escret of the respect they have thremelves, and no danguise of the fact that they are consection of weareal pointure, as it is in the former to be modest. Weleviren Minximum gives some vary neal examples of their in him shappher on solf-confidence, do fidence are

Not to go to the thantre is like making one's toilet without a mirror. But it is still worse to take a decrical without compiling a friend. For a maxmay have the most accollent in igneral in all other matters, and yet go wang in those which concern himself, became here the will comes in and derangus the intellect at muss. Therefore lot a man take commed of a friend. A destor can care awayone but binasft; if he falls ill. He could for a colleague.

In all that we do, we wish, more or less, to come to the and, we are impations to disselt and glad to be down. But the test some of all, the general end, is something that, or a rule, we wast as far off as may be.

Every parting gives a feretasts of death; every coming together again a foretasts of the resurrection. This is why even people who were indifferent to each other rejuice so much if they come together again after twenty or thirty years' expensions.

Intellects differ from one another is a very real and findamental way: but no comparison can well be made by merely general observations. It is necessary to come sizes, and to go into details, for the difference that axists cannot be seen from afar, and it is not easy to judge by outleward appearantum, as in the several cases of education, larisary and compation. But even judgang by these elimins it treat be admitted that many a men lum a dispress of emissions at least to turn as a high as mostless—in either words, exurts ten times as much server.

I am not speaking here of manges whose the is often only one degree above that of the spears their woods. Consider, for instance, a parter in Mayles or Vaules, (in the north of Maropo soliciteds for the winter menths makes people more thoughtful and therefore reflective); look at the life he leads, from its heginning to its end .- driven by poverty : living on his physical strength; secuting the needs of every day, nay, of every hour, by hard work, greek effort, constant tomple, want in all its forms, pe page for the morrow. his only comfort, real after axioustion, continuous guarraiting; not a moment free for reflection , such namenal delights as a mild climate and only insianticiant food well permit of, and then, finally, as the metaphysical element, the crass expersition of his shorth; the whole forming a memoer of life with only a low dagree of conscionenem, where a man hurtles, or rather is huntled, through his existence. This rections and confused dream forms the life of how many Langille

Sinch man think only jest so much as is messeary to sarry out their will for the memeat. They maver reflect upon their life as a connected whole, let alone, then, upon successes in general, to a cortain agternt they may be said to enice without really knowing it. The shistence of the medeman or the clave who lives on in the unthinking way stands very much nearer than ours to shot of the brude, which is confined antirely to the present moment; but, for that very reason, it has also tens of poss in it than ours. Nay, since all pleasure is in its meture angeltier, that is to my, counsists as freedom from name form of missay or need, the constant and rapidle interestings bond committing atoms committing the description of the work they do, the presented accommentation of the work they do.

and then again the sugmented force which this taken when they go from work to rust und the entirfaction of their needs—all this given them a constant some of enjoyment; and the first that it is much commonsto see happy fines amongst the poor than amongst the rich is a nove proof that it is much to good advantage.

Passing from this kind of man, consider, next, the sober, establic merchant, who leads a life of speechling, thinks long over her place and entering them out with great care, founds a home, and provides for his write, has shiftlens and december takes his share, too, in the life of the consumarty. He so before that a man like this hee a much higher degree of condomines that the former, and so his emissions has a higher degree of reality.

Then look III the man of learning, who investigates, it may be, the hastory of the peak. He will have reached the point at which e man become conscious of attained as a whole, sees beyond the period of his own life, beyond has own personal interests, thinking over the whole sooms of the world's history.

over the whose some on the more a nearly. Thes, finally, look at the post or the philosopher, in whom reflection has remained such a height, that, inteed of being drawn to to investigate any the particular phenomenous of emistones, he stands the amazement before artificates that, this grant sphine, and makes it has problem. In him constantaneous has reached the degree of clearance at which ill unbreach the world itself: him intellest has completely atandoned its function in the mercands of his will, and now holds the world hastow him; and the world atle upon him much more to examine and annular it than to

play a part in it bisself. If then, the degree of consciousase is the degree of reality, such a case will be mid to exist most of all, and there will be some and significance in so describing him.

Between the two unirumen here skutched, and the intervening stages, everyone will be able to find the place at which he bimself stands.

We know that man is in general superior to all other enimals, and thus is also the case in his capacity for being trained. Mobamenedans are trained to pray with their faces turned towards Mecca, five times a day. and they never fail to do it. Christians are trained to aross themselves on certain occasions to bow, and so on. Indeed, it may be said that religion is the aker d'ansere of the est of tenioron, because it tenior people in the way they shall think; and, as is well known, you assent begin the process too early. There is no absurdity so palpable but that it may be firmly planted in the human bend if you only begin to inexplosite it before the age of five, by constantly repeating it with an air of great selecunity. Por as in the ease of animals, so in that of mon, braining is successful only when you begin in early youth.

Noblemen and graillement are trained to hold nothing seared but there wered of human—to maintain a sealous, rigid, and vanishakes belief in the ridiculusa code of chiraky; and if they are called upon to do so, to seal their belief by dying for it, and mriously m regard a king as a being of a higher order.

Again, our expressions of politheses, the nompliments we make, in particular the respectful attentions we pay to ladous, see a mether of training; se also our others for good hirth, runk, talles, and meet. Of the same character is the resistants two finel at any runtil directed against wa; and the measures of this resentances; may be aractly electroismal by the matter of the inrulk. An Englishman, for instance, thinks is a deadly merels to be told that he is no gentleman, or, skill worse, that he is a line; a Franchisem has the same fasting if you call him a seward, and a German of you may be is world.

There are many persons who are trained 85 be strictly becorrebbe in regard to one marticular matter, while shap have fixthe honour to beast of in anything size. Many a man, for instance, will not steal your money; but he will lay hande so everything of yours than he can enjoy without having so pay for it. A man of business will often deceive you without the nightant surple, but he will absolutely notice to commits a their.

init a India

Imagination is strong in a men when that partionize function III the brain which eachim him to observe in roused to activity without any monemary ancisement of the senses. Accordingly we find that imagination is estive justs in proporteron as ure senses are not sectivel by external objects. A long period of solitude, whether he prison or in a cick-room; quest, twilight, darkness—these are the things that premote its activity; and under their unfluores it toutes into play of itself. On the other hand, when a great deal of material is presented to our families of observation, as happens as a yearney, or in the hunty-trarty of the world, or, again, in bound doplogid, the treagination is idle, and, some though call may be saids upon it, refuses to become active, as though it understood that that was not its proper time.

However, if the imagination in the yield any veal product, it must have menived a grout dead of material from the external world. This is the only way in which its storeshouse case be filled. The phantasy is murithed much in the same way as the body, which is least expelled of any work and enjoys foung nothing, just in the very motional when it receives its food, which it has to digest hand yet it is to this very food that it owns the power when it afterwards puts forth at the right time.

Opinion in like a pendulum and obeye the same law. If it goes past the centre of gravity on one side, it must go a tilts distance on the other, and it is only after a certain time that it finds the true point all which it can remain at each

By a process of contension, declares in open unless things lock small and therefore flees from defect. This is why a leadings books so stack better in a contracting surror or in a contension surror or in a contension surror or in a contens observer than it is in reality. The same effect in produced by distance in time. The somes and ovends of long ago and the persons who book park in them were a charming sepect to the eye of memory, which some only the outlands and takes no mote of dissipundable distable. The present unjoys no such advantage, and so it always means definitely.

And again, so requests space, small objects alone to us look big, and if they are very clean we may be able to ase nothing alon, but when we goe a bitle way off they become minute and invisible. It is the same, again, as regards time. The lattle insidents and accidents of every day fill me with sensions, anxiety, ampoyance, passeon, as long as they are alone to us, when they appear so big, so important, to serious, but as soon as they are borns down the resident steam of time they lose what significance they had; we think no more of them and soon forget them altogalant. They were big only beauses they were

Joy and sorvess are not ideas of the mind but affections of the will, and so they do not lis in the domain of memory. We cannot recall our loys and screews; by which I mean that we cannot renew them. We can recall only the ideas that accompanied them; and, in particular, the things we were led to say : and these form a games of our feelings at the time. Hence our memory of joya and sorrows is always imperiest, and they become a matter of in-difference to us as some as they are over. This sxplans the vanity of the attempt, which we sumsticut make, to review the pleasures and the pains of the past. Pleasure and pain are amorbidly an affect of the will: said the will m such is not powered of memory, which is a function of the intellect; and this in its turn gives out and taken in cotting but thoughts and ideas, which are not here in question. It is a consistent fact that in bad days we can year vividly recall the good time that is now no many; but that if good days we have only a very sold and imperfect memory of the last.

We have a much tester remainly for noteal objects or pictures than for more ideas. Hence a good imagination makes it enter to leave lenguages; for by its aid the new word in at once metad with the actual object to which it return, whereas, if there is no imagination, it is simply put on a parallel with the equivalent word in the mother tengen.

Measurize should not only mean the set of keeping something indirectly in the messary by the use of some direct pun or wistician, is should, rether, he applied to a systematic theory of memory, and axplain its several attributes by reference both to its real nature and to the colables, in which these attributes should be one another.

There are momente in lefs when our senses obtain a higher and sever degree of electrons, apart from any particular conscious for it in the nesters of our empreomatings, and emphosish, nathew, on physiological grounds alone, as the result of some enhanced state of exacespitability, working from within outwards. Such moments remans indeltify supercond upon the memory, and preserve themselves in their individuality entire. We can emign so reserve for it, not applain why this among so many document for its interest about the specialty commisseed. It seems as much a matter of chance as when single specianons of a whole rates of scientism now astington specianons of a whole

layers of a vook; or when, on opening a book, we light upon no insect socidentally exusted within the layer. Mamories of this kind are always sweet and pleasant.

We considerably hospones that, for no particular reason, long-forgottes means suddamly stack up in the internery. This may no sunury came is due to be the solito of some hardly purceptable edon; which accompanied these somes and now recews anothy the same as before. For it is well known that the sense of small is specially effective is smalling memories, and that in general it does not require such to rouse a train of idea. And I may say, in passing, that the same of against one of the training like same of the ring with the reason's and, as we see in the present case, the sense of sensel with the minory. Touch and Thete are more instanced and depandent apon constent. They have no ideal side.

It must also be restrand among the peculiar attribute of numery that a singhi state of invariantion often segretly enhances the recollection of past times and somes that all the circumstances countered with them come back nutch more clearly than would be possible in a state of according to be that, on the other band, the recollection of what one said or dut while the intestemin leafed in more than untuity maperfect; may, that if may has been simulately tipey, if is good althoughton. We may say, then, that

^{*} Frankrik Wood, 6 St.

A Person, rol. i., 6 32 L.

whilst interiories unhances the memory for what is part it allows it to resembler little of the present.

Man mood some kind of enternal activity, because they are inactive within. Contrarily, it thay are satire within, thay do not ome to be dragged nut of thomselves, it disturbs and impades their thoughts in a way that as often most ruinear to them.

I am not surpress! that some people are bared whim they find themselves alone; for they cannot largh if they are quite by themselves. The vary idea of it seems felly to them.

Are we, then, to leak upon lengther as merely a signal for others—a nece sign, like a word? What makes it impossible for people to length when they are alone is nothing but want of imagnosion, dulants of mind generally—down-flyers out flashwip words, as Theophrastus has fe? The lower camman naver large, either alone or in company. Myseen, the missathropist, was once steppings by the was once steppings of the was deep in the sale of these people as he was langthing to hincell. Why do you fought in a taked, there is not one with you. That so your only I con langthing to hincell.

Natural gasticulation, such an essummenty accompanies any lively talk; is a language of the own, more widespread, even, then the language of words—so far, I mean, as it is independent of words and alike is all uniteds. It is from that retices make was of it in

¹ Chemius, e, St.

proportion as they are vivacious, and that m particularsesses, amongst the Balianov for instance, it is supplmented by certain possible gestures which are marely conventional, and therefore possessed of nothing more than a local value

In the universal two made of it gesteristion has some analogy with hopic and generator, in that it has some analogy with hopic and generator, in that it has to do with the force ruther them with the matter of sonversation; but on the other hand it is distinguishable from those by the fact that it has move of a normal than of an intellectual bearing, in other words, is reflects the movements of the well. As an accompanionent of conversation it is blue the base of a malody, and if, as in mosts, it keeps true to the progress of the trable, it serves so beighten the either.

In a conversation the gestare depends upon the form in which the subject-metter is conveyed , and (s is interesting to observe that, whatever that subjectmatter may be, with a recurrence of the form, the very same gesture is repeated. So if I happen to see-from my window, may-two persons carrying on a lively sonversation, writerst my being able to catch a word, I may nevertheless understand the general nature of it perfectly well; I menu the kind of thing that is being said and the form it taken. There is no mittake about it. The speaker m arguing about something, advancing his reasons, then limiting their appliestion, these driving them home and drawing the conclusion in triumph; or he is recounting his experiences, proving, perhaps, beyond the shadow of a doubt, how much he has been minred, but bringing the eleanest and most durating evidence to show that

88 his epponents were fitalish and photingle poores who would not be convinued; or she he is telling of the splandid plan he baid, and how he carried it to a successful issue, or perhaps failed become the luck was against him; or, it may be, he is eaving that he was completely at a loss in know what to do, or that 55 was quick in seeing through some true art for him.

and that by incisting on his rights or by applying a little force he succeeded in frustrating and punishing his spenies, and so on in bundreds of mess of

a gimilar bind. Strictly speaking, however, what I get from gestisulation alone is an abstract notion of the assential drift of what is being said, and that, too, whether I indge from a moral or an intellectual point of view It is the unintersease, the tree substance of the conversation, and this remains identical, no matter what may have given rise to the conversation or what it

may be about: the relation between the two being that of a personal idea or class-name to the individuals which it gomes. As I have said the most inherenting and amusing part of the matter is the complete identity and solidar-

ity of the gestures send to denote the same set of ourconstances, even though by people of very different temperament; so that the gustages become exactly like words of a language, althe for every one, and subject only to such small modifications as depend upon variety of accept and admestion. And yet there can be no doubt but that these standing restures which every one case are the result of an oppression or collection. They are received and impate a true beginned of setting; quantificated, it may be, by insitetion and the influence of custom.

It is well known that it as part of an actor's duty to make a serebil study of guildre; and the came thing

I true to a communicat number degree, of a public

speaker. This study must associat chiefly in watching others and imitating their movements, for there are no abstract rules fairly applicable to the matter, with the exception of seme very governal leading principles, meh as to take an example that the grature must not follow the word, but rather come immediately before it by way of abnouncing its approach and attracting the heaver's attention. Englishmen entertain a pacetiar contempt for garinsulation, and beak uses it as something vulgar and undiguified. This cours to me a sally prejudice on

their part, and the outcome of their general prudery. For here we have a language which sators has given to every one, and which every one understands; and to do away with and forbid it for no better reason. than that it is opposed to that much-landed thing. gentlemanly feeling, in a very questionship proceeding

ON EDUCATION.

OR EDUCATION.

The branch inhelical is said to be so constituted that present islace arise by electrocition from particular observations, and therefore come after them in point of time. If this is what actually occurs, as happens in the name of a mean who has to depend noisly upon his own experiences for what he hasten,—who has no has come and the seadur and no hook,—couch a uses finered,—who has no representational before a time the while while which of his particular observations before a full has a representable by said of his general ideas. If has a particular channels are with both sides of his axperience, and accordingly he breats encything that comes in his way from a right steadpoint. This might be called the neithern's method of education.

Contractly, the entitletial method is to hear while other people say, to learn and to read, and so to get your head creasured fault of general ideas helders you have any sort of estended enquantance with the world as it is, and as you may see it for yourself. You will be told that the partenular observations which go to make these general ideas will come to you leter us in the sources of experience, but until that time arrives you apply your general ideas verougly, you judge seem and things from a wrong standpoint, you see them in a wrong laybt, and treat them in a wrong way. So it is that effective purvets the mind.

This explains why it so frequently bappens that, after a long course of learning and reading, we enter upon the world in our youth, partly with an artises ignorence of things, partly with wrong notions about them: so that our demonstrate myours at one moment. of a narrone anxiety, at unother of a mistaken con-Science. The reason of this is elempty that our head in full of general ideas which we are new trying to turn to some use, but which we hardly over apply rightly This is the result of noting to direct opposition to the natural development of the uniced by obtaining general ideas first, and particular observations has it is nothing the cart before the heree Instead of developing the shift own feestees of discarment, and tenching at to judge and think for starif, the tanger uses all his anseress to stuff its bood full of the readymade thoughts of other people. The mistaken views of life, which spring from a false application of general ideas, have afterwards to be corrected by long years of experience; and it is soldow that they are wholly sorrected. This is why so few men of learning are possessed of common-sense, such as is often to be melwith m people who have had no instruction at all.

To accretion a invertiseign of the world might be defined as the sam of all education; seed it follows from what I have said that appeal where should be ladd upon beginning to negative this knowledge of the right ered. As I have shown, this means, in the main, that the particular observation of a thing stall persons that guesses idea of it, further, that success and circumscribed clean shall some observations of a wide range I; means, therefore, that the whole system of advantage of the contract of the co

tion shall follow in the slope that went have been taken by the ideas the micros in the course of their formation. But whenever my of these stops are skipped or left out the impression is defective, and the ideas obtained are false; and finally a distorted view of the world arrana, possition to the individual himself -- wise much as almost everyone entertains for some time, and most men for as long as they live No out can look into hes own sund without seeing that it was only after reaching a very mature age, and in some cases when he least expected it, that he came to a right understanding or a clear view of many matters in his life that, after all, were not very difficult or complicated. Up tall then they were points in his knowledge of the world which were still observe, due to his having ekipped some particular leasen in these early days of his advention, whatever it may have been like-whether artificial and conventional, or of that natural trind which is based upon individual experience.

It follows that an attempt should be made to find out the strictly asternal occurs of knowledge, so that scheated trap proceed sectors for the swap to the state of the way for the world without getting wrong riess into their heads, which very often annece be get out again. It this plan were adopted, special care would have to be taken to prevent children from using words without clearly understanding their reasing and application. The finish tendency to be minished with worlds instead of teleping to understanding their particle with worlds instead of teleping to understand things—to learn phrases by least, so that they may grown a refuge is

time of mod, exists, as a rule, own; in shildren; and the tendency lasts on injus quashood, making the knowledge of sumy learned parsons to consist to more verbings.

However, hhe main embrower must always be to the particular chaeverstimm precede general ideas, and pot wice were, as in mentally and sub-rimeslay because; as though a child should come foot foremost unto the world, or a wome be begun by writing down the rhymne! The orchnery method is to imposs i deas and opinions, in the start seems of the world, prejudden, on the mund of the child, before it has had any but a very few particular observations. It is that that he afterwards comes to view the world and gather experience through the modelium of these ready-made ideas, rather than to let his ideas be formed for him out of his own sexperience of life, as they ought to be.

A man seen a great many things when he looks at the world for homeals, and be seen them fixty many sides, but this method of learning is not nearly so shorts or as quick as the seethod which employs abstract ideas and makes heaty generalizations about everything Experisons, therefore, will be a long time in correcting preconceved ideas, we perhaps never bring its test to one and, but whenever a man tink that the superct of things stoom to contradict the general ideas he has forment, he will begin by rejecting the evidence is often as perial and one-study in any he will shat his syes to it altogether and deny that is claude in any controllation at all with his proconcutred systems, in order that he may then preserve than uninjused. So it in that meny a men carries about a burden of wrong notions all his life long crobbets, whire, fission, projection, which at leaf hacone fixed ideas. The first is that he has next tried to form his finademental ideas for feizured to set of his own experience of life, his own way of looking as the world, because he has taken over his ideas ready-made from other people, and this it is that makes him—as it makes how meny others—so shallow and superficial.

Instead of that mathed of instruction cure should he taken to educate shildren on the natural Knee. No idea should over be established in a shild's mind otherwise then by what the shild east one for itself, or at any rate it should be varified by the man mane. and the result of this would be that the child's ideas, if few, would be well-grounded and accepte. It would lases how to massere things by its own standard rather than by another's, and so it would means a thousand strange faccies and projudices, and not used to have them eradicated by the lessons it will subsequantly be taught in the school of hife. The shild would in this way, have its mind once for all habituated to clear vector and thereach reine knowledge: is would use its own judgment and lake an unbiased estimate of things.

And, in general, shaldran should not from the nations of what life is like from the capy before they have bestered it from the neighbours as whotever capsed of it their attentions many be described. Instead, therefore, of burtoning to place heels, and beaks alone, in their banks, let them be made asquainted, step in

step, with things—with the actual circumstances of human life. And above all let care he taken to bring them to a clear and objective view of the world as it is, to advente them always to derive their ideas directly from real life, each to shows those in conformity with it must be fulch them from other courses, such as books. fairy tales, or what people my, and then apply them. remly-made to real life. For this will mean that their heads are full of wrong notions, and that they will either out things in a false light or try in valu to remedal the world to suit their views. and so enter upon tales paths; and that, too, whether they are only constructing theories of life or sugared In the actual business of it. It is incondable how much harm is done when the stade of wrong notions are laid in the mind in those early years, later on to bear a trop of prajection; for the subasquent lemons which are learned from real life in the world have to be devoted mainly to their extirpation. To unlearn the avil was the answer which, contriling to Diograms Learting, Antiethous save, when he was asked what branch of knowledge was most accuracy; and we can nos what he meant. No child under the age of fifteen should receive

for cannot three me sign of the representation of the relative factors and the second of the second

either in subjects where no excer in possible III all, such as mathematics, or to them in which there is no particular danger in making a mestale, such as languagea natural science, kindury, and so or. And in general, the hematics of knewledge which are to be studied at any period of him should be such as the mind is equal to at that period and can parfactly understand. Childhood and youth form the time for collecting materials, for gotting a special and thorough knowledge of indurched and particular though the whole of its should be such as the particular stores years it is into carry to form views on a large scale; and ultimate apphrations must be put off to a later date. The faculty of judgment, which cannot be left to itself; and care abould be taken not to anticipate its scilion by mendesting projudics, which will paralyse it for seve.

On the other hand, the memory should be spacially texed in youth, some is in they that it is strongert and most tenselous. But in choosing that the throught must be stronger than the should be committed to memory the extense ours and forethought must be exceeded, as bescons well beared in youth are never forgethen. The precious soil must therefore be cellivated so us to bear as much fruit as possible. If you think how desply rooted in your memory are those passons whom you knew must first twelve years of your life, how indicable the impremion made upon you by the events of those years, how clear your recollection of nost of the things that happened to you these, most of what was told or taught you, it will make a matural thing to take the samegatability and hemoticy of the cound at

that paried as the groundwork of attraction. This may be done by a struct observance of method, and a systematic regulation of the impressions which the tend to receive.

But the years of youth allotted to men are short. and memory in in general, bound within narrow limits, still more so the managery of any one individual. Since this in the case, it is all-important to all the memory with what is essential and malerial in any branch of knowledge, to the exulusion of everything the. The decision as to what is constitud and material should rust with the mester-minds in every department of thought; their choice should be made after the most mature deliberation, and the oricoms of it fixed and determined. Such a shoire would have to proceed by airling the things which it is necessary and important for a man to know in general, and then necessary and important for him to know in any particular business or calling. Knowledge of the first kind woold have to be classified, after an encyclopedia fashion, in graduated convent, adapted to the degree of general culture which a man may be expected to have in the circumstances in which he is placed; beginning with a source limited to the necessary requirements of primary education, and extending upwards to the outjects treated of in all the branches of philosophical thought. The regulation of the second kind of knowledge would be left to those who had about grainful mestery in the prevent departments and which it is divided; and the whole system would provide an elaborate rule or cancer for intellectual education, which would of

source, have to be swined every ten years. Some such arrangement as this would employ the youthful power at the memory to best selvantage, and supply excellent working material to the faculty of judgmont, when it made its apparatuse later on.

A man's knowledge may be said to be mature, in other words, to have reached the most complete state of perfection to which he, me an individual, is espable of bringing it, when an exact correspondence is established between the whole of his abstract ideas and the things he has estually persured for himself. This will mean that such of his chetract ideas rests, directly or indirectly, upon a base of observation, which alone endows it with any real value; and also that he is able to place every observation he makes under the right abstract idea which belongs to it Maturity is the work of experience alone, and therefore it reunires time. The knowledge we derive from our own observation is possity distract from that which we secure through the medium of abstract ideas, the one coming to us in the natural way, the other by what people tell us, and the course of instruction we reserve, whether it is good or had. The result is that in youth there is generally very little agreement to correspondence between our abstract siens, which are merely phrases figed in the mind, and that real knowledge which we have obtained by our own observation. It is only later on that a gradual approach takes place between these two kinds of knowledge, accompanied by a mutual correction of error; and knowledge is not mature until this mulitime is accomplished. This maturity or perfection of knowledge is eccepthing

quite independent of another kind of particular, which may be of a high at a low order—the perfection, I toean, to whigh a men may bring his own individual faculties, which is measured, not by any occrependout between the two kinds off knowindge, but by the degree of intensity which outh kinds attains.

For the practical ment the most seedful thing is to enquive an assumable and predemed knowledge of the course of the seeds. But this, though the most needful, is also the most weekful, the other the most seedful, is also the most wearisense of ell studies, as a man may reach a great age without counting to the end of the tank; whereas, in the donesing to the end of the tank; whereas, in the donesing the best when he is still young. In unquirang that knowledge of the world, it is while he is a nowice, amontally, in toy-kood and in youth, that the first and hardest lessons are put before him; but is often happens that even in later years there is still a great dail to be lauruad.

The study is difficult enrough in ideals, but the difficulty is doubled by especia, which represent a state of things in life and the world such as, in face, does not much. Youth is credwise, and coupts these reper of His, which these become part and parcet of the saind so that, instead H o secrety segative condition H ignorance, yen here positive error—a whole tissue of false motions be start with; and at a take date there actually spoil the schooling of experience, and put a wrong constructions on the issueson it tenders. If, bafrow this, the youth had no light of all to guide him, he is now school by a will-of-the-wisp; still more often is this the case with a girl. They have both had a false view of things faithed on to them by reading novalu; and expectations have been account which can novar be findfilled. This generally accordes a hearful Indiances on their whole life. In this respect those whose youth has allowed them no time or opportunity for reading soverles—those who work with their repeating soverles—those who work with their repeating. There are a firm merels to which this represent example had been addictated—may, which have an affect the centrary of had. First, and foreward, to give an example, Grif Bing, and the other works of Le Eager (or rather thear Spanish originals); further, The Fourty of Wahlfeld, and, to some actuart, Sir Walter Bookin novals. Dot. Quivose may be regarded as a mittiest arbitistical with a series to whole I can reduction.

OH WOMEN

SCHILLEN'S poem in honour of women, Words der Presen, is the result of numbs constitut thought, and it appeals to the reader by its untilibries style and its use of contract; but as an expression of the first praise which should be seconded to them, it is, I think, interior in these few words of Jony's Wethout women the beginning of our life would be hilpites; the middle, devoid of pleasures; and the style operation. The same thing is more feelingly expressed by Byron in Berdenspelce:—

Of humans high vessel agreeap from summers to because the first array first for the stand worsh ow tomple you from her lays. First free generally by the conductive terms of the standard worsh ow to worship to the first free free three generally by the conductive test in a storman's haverage, When tense have durated frees the specialise never Of attaching the limit hour of hims who tot shows, that I do the conductive test frees that the standard frees the first frees.

These two passages indicate the right standpoint for the appreciation of women.

You need only look at the way in which she is formed to see that weman is not meant to undergo great labour, whether of the send or of the body. She pays the sholt of the not by what she does but by what she suffers, by the mans of childhearing and care for the shild, and by submission to her husband, to whom the should be a patients and obsering companion. The heamest surveys nod joys are not for her, nor is she called upon to display a great deal of strength. The current of her life should be more gootly, peaceful and strival than men's, sethout being sementially happear or submodier.

Women are directly filted for acting as the nurses and teacher of our early childhood by the fact that they are themselves children, friedoms and short-sighted, in a word, they are big children all their life long—a hind of intermediate stage between the shill and the full-grows man, who is cann in the stript same of the word. See how a girl will fondle a child for days together, dance with it and sing to it; and then think what a man, with the best will in the world, could do if he were pot in her place.

With young girle Netere essens to have had III view what, in the hanguage of the draum. It called a coup da shidter. For a few years she deware them with a wealth of hanny and is tavish, in her gift of charm, at the expesse of the rees of their life, in order that during thous years they trap opsitive the fantary of none munt to med in degree that he is hurried mic indistabiling the homourable core without in some fent or other, so long as they hive—a step for which them would not appear to be any sufficient warranty if reason only christed his thoughts. Accordingly Nature has equipped witness, in she does all her creatures, with the waspens not implements requiring for the indegnarding of her uncetands, and for just as long as it is measuring for her to have them. Been

as sleawhers. Historic proteins with her usual concerny; for just as the formed and, after frequencies, local har wings, which are then upserflowes, easy, schould a changer to the business of brooding; so, after giving birth to one or two children, a woman generally lesse har beauty; probably, heleed, for civiliar reasons.

And so we find that young giris, in their hearts, look upon demantic affilink or work of any kind as of ascendary importance, it can extend so as more join. The only business that readly claims their cornect attention is love, making conquests, and everything connected with this—dwas, denoting, and so on.

The cuty beamson their really cleams near series attention is fore, making conquests, and everything connected with this—dream, denoting, and so on.

The nobler and more perfect thing is, the later and stower it is in saviving so esciurity. A man-reaches the materially of his reasoning powers and smooth familiate hardly believe the ege of wrusty-night; a woman, at eighteen. And then, ten, in the mass of woman, it is only mason of a sort-very niggard in its dimensions. That is why women remain children their whole life long; never evelng anything but what Is quite close to them, cleaving to the present moment, taking appearance for reality, and penduring triffs to matters of the flust importance. For it is by virtue of his reasoning feedby that man does not live in the present only, like the brute, but looks about him and sounders the past and the fature; and this is the origin of prudence, as well as of that were and analyty which so many people sublish. Both the advantages and the disadvantages which this involves are shared in by the woman to a smaller extent because of her weaker power of reasoning. She may, in fact, be deseribed as intellegisally shorteighted, homes, while

she has an industries understanding of which his quite sizes to her, her find off vision in marrow and does not reach to what is remote: m that things which are absent or park or in assess have much fare effect upon women than upon son. This is the reason why wenter has upon the This is the reason why wenter are more offen insiliuand to be acteauragent, and anomhimes carry their insiliuation to a longest that bedrefer upon Endsham. In their faster women think that it is attent homeste to ours money and theirs to pend it—if possible during their bushand's life, but, as any cuts, after his during their bushand's life, but, as any cuts, after his duals. The surp fact that their humband hands them over his cornings for pirposes of househooging strungthens them is this belief.

However many dissolventages all this may involve, them is at least this to be said in its favoir: that the woman lives toom in the present than the man, and that, if the present is at all tolerable, ahe sujectly. This is the source of that theservlams which is presentling to woman, fitting her to assign much in the form of reventions, and, in the or of need, to console him when he is herea down by the weight of his once of this care.

of this carest. This is you known a had plan to consult wemen in mattern of difficulty, no the Germanns used to do in ansient times; for their way of looking at things is quite different from own, shinlify in the fact that they like to take the shortest vary to their goal, and, in general, meange to fix thisir syms upon what lits before them; while we, as a rule, see far beyond it, just because it is in front of our mount. In cases this part because it is in front of our mount in case that he had not been the point of t

Thee, again, women are destinally more solar in their judgment than we are, as that they do not see more in things than is really those; while, if our passions are around, we are eight to see things in an amagentated way, or imagine what does not exist.

The weakness of their suspenior faculty also explains why it is that wemen show more sympathy for the unfortunate then uses do, and so treat them with more l'induses and intercel; and why it is that, on the contrary, they are inferior to men in point of metics, and less honourable and consumntions. For riis just because their resessing power is wear that present alrosmatances have each a bold over them. and those concrete things which lie directly before their eyes exercise a power which so soldom counterseled to any extent by abstract principles of thought, by fixed rules of conduct, from seccitations, or, in general, by consideration for the past and the ferrors, or regard for what is absent and camots. Accordingly, they possess the first and main elements that go to make a virtness character, but they are deficient In those secondary qualities which are aften a necessary instrument in the formation of it.

Minors it will be found that the fundamental Rulls of the founds character in that it has no sense of position. This is seamly due to the fact, already mentioned, that women are defined on in the powers? Traccining and deliberation; but it is also traceable to

In this request they may be compresed to an unusual organism which continues a lover but no gold-blackdor. Here his no color to what I have need as my function on the 2-mediators of Morain 1 25.

the position which Nature has assigned to them as the weaker sun. They are dependent, not upon strength, but upon code; and hance their instinctive requesty for carning, and their immediable tendency to my what is not brin. For an linear are provided with claws and touth, and elephants and hears with tracks, build with horse, and the cattle fish with its aloud of inky fined so Nature has seniuped woman. for her defence and protention, with the arts of dissimulation, and all the power which Nature has emferred upon man in the obeys of physical strength and reason has been bestowed upon women in this form. Hance desimalation is unsets in women, and almost as usuals a quality of the stupid as of the slaver. It is an natural for them to make use of it on every consion as it is for those animals to surplay their means of defense when they are estacked , they have a feeling that in doing so they are only within their rights. Therefore a woman who is perfectly tenthful and not given to dissimulation is pechane an impossibility, and for this very research they are so quick as seeing through distinuistion in others that it is not a was thing to ettempt it with them. But this fundamental defect which I have stated, with all that it enterle, gives rise to falsety, fastbluseness, breachery, ingrabitude, and so on. Perpury in a pourt of justice is more often committed by wants than by men. It may, indeed, be generally questioned whether women qualit to be sween at all. From time to time one finds repeated cases everywhere of ladies, who want for nothing taking things from abop-sounters when no one is looking and making off with them.

Nature has appointed that the propagation of the species shall be the business of men who are young, strong and handsome; so that the race may not degeno-

rate. This is the firm will and purpose of Nature in regard to the species, and it finds its expression in the passons of womon. There is no law that is alder or more powerful then this. Wee, then, to the man-Who sate up claims and internets that will conflict with it, whatever he may my and do, they will be unmercifully preshed at the first serious encounter. For the inpute rule that governs women's conduct, though it is secret and unformulated, may, unconscious in its working in this. We are justified in decriping those who think they have acquired rights over the species by paying bittle attention to the individual. that is, to us. The constitution and, therefore, the melfars of the species have been placed on our hands

and committed to our care, through the control we obtain over the nest generation, which proceeds from tte: let us discharge our duties conscientiously But women have no abstract knowledge of this leading

principle; they are conscious of it only as a concepts flot, and they have no other method of giving expression to it than the way in which they sot when the opportunity arrives. And then their conscience does not trouble them so much m we hancy; for in the darkest recessor of their heart they are aware that, in committing a breash of their duty towards the individual, they have all the letter fulfilled their duty towards the species, which is maintely greater. 1 A more detected discusses of the matter or question may be found as my shief work, Do Welt on Welt and Fertilling, TOL 34, 60, 66,

And aimse women exist in the main salely for the propagation ill the species, and are not decrined for enything cles, they have, an a rule, more for the species than for the individual, and in their hearts take the efficie of the species move unroundy than those of the individual. This gives their whole life and being a option levity; the general heart of their character is in a direction fluedomestably deficesed from that of man, and it is this which produces that discret in married life which is an frequent, and almost the normal state.

The natural feeling between men is more indifference, but between women st to actual enmity. The reason of this is that trade-realousy-odium figuiliname-which, in the case of men, does not go beyond the confines of their was perticular pursuit but with women surbruces the whole out; since they have only one kind of business. Bree when they meet in the street weenes look at one earther like Guelphs and Chibelines. And it is a patent fact that when two women make first anguauningos with mach other they behave with more constraint and dissimulation than two men would show in a like one; and hence it is that air exchange of compliments between two women to a much more ridiculous proceeding than between two men. Further, whilet a man will, as a general rule, always preserve a serious amount of consideration and lementity in speaking to others. even to those who are in a very inferior position, it is intolerable to see how promily and distainfully a fine lady will concretly believe towards one who is in a lower coriet mak (I do not meter a women who is in her nervice), whosever she speaks to her. The reason of this may be that, with vesses, differences of rank are much more prescribes then with us; boostes, while a hundred considerations carry weight in our case, in theirs there is only one, seemely, with which must they have found favour, or size that they stand in much neaver rabblem with one specifier than seemed, in consequence of the one-sided nature of their calling. This meless them undesever to lay sires upon differences of rank.

It is only the man whose intellest is clouded by his sexual impulses that sould give the same of the fair hipped, and short-legged race: for the whole beauty of the sex is bound up with this empulse. Instead of calling them beautiful there would be more warrant for describing women se the unnethetic sax. Norther for music, nor for poster, nor for the art, have they really and sculy car more or susceptibility; it is a mere monkery if they make a protone of it in order to naries their endeavour to please. Hence, as a remain of this, they are inespuble of taking a purely objective interest in anything; and the reason of it direct martery over things, either by understanding them or by forming them to do his will. But a woman is always and everywhere induced to obtaining this mestery indirectly, namely through a man; and whatever direct constant the man have in activaly confined. to him. And so it lies in woman's nature to look HOOD SYSTEMATOR COMP AS A MINISTER FOR SURGESTING THAT ! and if the taken on interest in anything the it is daulated-a men remident way of gaining hat ands by enqueiny and faigning what she does not feel. Hence even Boussen deslared: Women have, in general, no lost of any art; they have no proper brotoladge of any ; and they have no assisted

No one who mean at all below the surface our have failed to remark the same thing. You need only observe the kind of attention wemen bestow upon a concert, an opera, or a play-the children simplicity, for example, with which they keep on chattering during the finest passages in the greatest masterpieses. If it is true that the Greates arounded women from their thanken, they were quite right in what they did; at any rate you would have been able to hear what was said 30co the clara. In our day, boddes, or in lies of saring. Let a women keep silence in the church, it would be much to the point to any, Let a seemonbeen ellened in the theaters. This might, purhaps, be put up in his letters on the cartain.

And you manot expect enything else of women if you consider that the most distinguished intellects among the whole our have never managed to produce a single achievement in the fine arts that is really great, genuine, and original, or given to the world any Work of permanent value in any ophers. This is most strikingly shown in regard to parating, where martery of technique is at least so much within their power so within ones and bases they are diligent in cultivating it; but still they have not a sizele ereat painting to beast of just become they are deficient in that objectivity of mind which in so directly ladis-* Laborate Statement Statement

penable is pointing. They never get beyond a subjective point of view. It is quite in keeping with this that ordinary werem have no real susseptibility for art at all; for Padero proceeds in strict sequencenon fluid solden. And Hustin in his Section of inguise pere ha acionaise -a book which has been famous for these hundred years desice woman the trommaion of all the higher faculties. The case is not altered by particular and partial exceptions; taken as a whole, women are, sad comein, therough-going phillrines, and quite incurable. Hence, with that abrurd arrangement which allows them to share the rank and title of their husbands, they are a constant stimulus to his ignoble ambitions. And, further, it is just because they are philiptines that modern scolety. where they take the lead and set the tone, is in rush a had way. Nanoleen's saring -that seemen house us rank-should be adopted so the right standpoint in determining their position in society; and as regards their other qualities Chamfort? makes the very true remark. They are made to trade with our own weakmasses and our follow, but not with our region. The sympathies that exist between them and men are siriedeep only, and do not touch the mind or the fadings or the character. They form the some musion—that second sex, inferior in every mopeut to the first ; their infirmities should be treated with quesideration; but to show these great revenues in extremely ridicalous.

³ Numbelov's Wale. Junn Humin (1980)—1989) practiced at a physician at Madridi. The work sitted by Sobopenhauer at well income, and has been translated min many languages. S Nembelov's Mole. See Committed Millering. to 12. Hotel.

and levers us in their eyen. When Habitre enads iver divisions of the human ram, the chid not draw the time samely through the middle. These divisions are polar and opposed to each other, it is here; but the difference between them is not qualificative morely, it is also quantitative.

This is just the view which the nestents took of woman, and the view which people in the Bast take is mov; and their judgments as to her people position much move our content to the proper position much move our content to the proper position of galantery and one propositions system of two-scans—their highest peoduce of Twestowno-Christian strapidity. These nestions have severed only to make women more arregant and evertheading; to that our consistently reminded of the holy spec III Bennes, who is the consciousness of their searcity and in violable position; which they one ob example as they please.

But in the Wast the women, and especially the ledg, finds becest in a fulse position; for women, rightly called by the anchose some sequely, is by no means if a to be the object of our heaves and renar-tion, or to hold her head higher than some and be on equal hornes with him. The consequences of this fulse position are undishmily obvious Accordingly is would be a very desimble thing if this Rumber Two of the human race were in Borope also relegated to har next rapid plant, and so me and put to the hady-unisans, which not only moves all Asia to taughter but would have been militariled by Greece and Rome as well. It is impossible to calculate the good effects which such a change would bring about in our world, vivil and political correspondent. These would have no assessing

for the Salin law : it would be a superflaces trains. In Europe the feely, strictly as called, is a being who should not exist at all; she should be ofther a housewife or a girl who hopes to become one; and she should be brought us, not to be arregard, but to be thrifty and sobsciouses. It is just because there are such people as Indees in Europe that the women of the lower classes, that is to my, the great majority of the sex, are much more unhappy then they are in the Bast. And even Lord Byron says: Thought of the state of somen under the ensient Grade-concenious mouch. Present state, a remnant of the barbarism of the chinabris and the fonder aparentificial and unnatural. They ought to mind home-and be soon fed and elothed-but not mixed in society Wall educated, top. in religion—but to read terisher pastry rar politica— nothing but books of greety and coopery. Music— drawing—denting—also a little gardening and ploughing note and then. I have seen them mending the roads in Evieno with seed second. Why not as will as hely-making and milling !

The lever of marriage provesibles in Berope consider the woman as the equivalent of the man—short, that is to my, from a wrong position. In our part of the world where monogeney is the rule, to marry means to have our's rights and double outle dettion. Now when the laws gave women equal rights with man, they cught to heave also undownal her with a manufalm intallest. But the fact is thin, just to prepartion as the heaters and privileges which the laws accord to women accord the amount which flatament gives, there is a dimination in the number of women who really

participate in these partileges; and all the remainder are deprived of their metasual rights by just so much as is given to the others over and show their share. For the institution of monograms, and the laws of marriage which is cotolis, bustow upon the woman as quantum position of privilege, by considering her throughout as the full equivalence of the man, which is by no peans the one; and seeing this men who are shrewed and product very often secupic to make so great a carribos and to asquissoo in so unfair an attemperature.

Consequently, whilst emong polygomens nations every woman is provided for, where monegamy prevalls the number of married wamen is limited; and there remains over a large number of women without stay or support, who, in the upper pleases, vegetate or under old maids and in the lower success. to hard work for which they are not mitted; or slat become Alies de jose, whose life in an destrible of joy so it is of honour. But under the circumstances they become a necessity, and their position is openly recogpleed as serving the special and of wording off tempthtion from those weepen favoured by cate, who have found, or may hope to find, husbands. In London alone there are \$0,000 prestitutes. What are they but the women, whe, mader the institution of moongamy, have some off want? Theirs is a dreadful fate: they are busine merifies officed up on the after of monogamy. The women whom wrotehed position. is here described are the inevitable vet-off to the European hely with her arrogance and pretousion. Polyguny is therefore a real benefit to the founds my If hi is falken up a whole. And, from question point of view, there is no bette restate why a mean whose wife suffers from shreeto illings, or remains harven, or has gradually become too old fer hive, should not take a second. The motives which induces or many people to become a converte he. Morromenian appear to be just those which militate against the unastered institution of monogous.

Moreover, the bestevul of unnebted rights upon woman has imposed upon them enestered duties, and navertheless a breach of three duties makes them unhappy. Let me explain. A most may often think that his social or amazonal position will suffer if he marries, unless be makes come boiliant alliance. His daring will then be to win a woman of his own shops trader conditions other than those of marriage, such as will secure her position and that of the children. Howaver fair, ressonable, 6t and proper these sonditions may be, if the women concernie by foregoing that undus amount of privilege which marriage alone san bestow, she to some extent losse her honour, besame marriage is the hasin of more society, and the will lead no unhappy life, eince bemen auture is so scatituted that we pay an attention to the opinion of other people which as out of all proportionate to the value. On the other hand, if also does not possent, she runs the rick either of lawing to be given in marriage to a mun whom she does not like, or of being landed bigh and dry at an old maid; for the purpod during which she has a change of bulge notifed

³ Provinter's Hits. The Monaces have recently group of polygrapy, and reason! the American franches in the sized.

for life is very shock. And in view of this aspect of the institution of memogeney, Thomasius' protoundly learned treation do Gaussiainus is well worth reading; for II shows that, amongot all nations and in all aga, down to the Lutherma Beformstein, convulvinger was permitted; say, that it was an featibilize which was to a certain actual actually energised by law, and attended with no deviscours. It was only the Lutheran Bellemation that degraded at from this position. It was some to be a further justification for the marriage of the eleggy; and then, after that, the Catholic Charele did not done to remain publicalized in the matter.

There is no nee arguing about polygamy; it must be taken as the feate existing everywhers, and the only quantum is as to how it shall be regulated. Where are there, then, any real monagazzins? We all live, at any reals, for a time, and needs of an lawys, in polygamy. And so, some every man needs many women, there is nothing fearer than to allow him, nay, to make it in each set are being to make it in each set ago thin, to previde for many women. This will reduce women to her ten and natural position as a subscrimeds using, and the lady—that mounter of Hampenes evidentians and Toutonipo-Christian abuyidity—will damppene from the world, leaving only someon, but no leaves weblegryl women, of whom Kineppe is are finely

In India no woman is over imbependent, but in accordance with the law of Minan, who whants under the control of her fisher, her hardward, her bretten or her son. It is, to be sure, a revoluting thing that a

³ Ch. Y., v. 246.

widow should immakes harrolf upon her bracked's funceal pyre; but it is also revealing that he should syred has hashand's memory with her paramours—the money for which he totaled his whole life long, in the coraching belief that he was providing for he children, Easylyy are those who have kept the saiddle course seathers termore leasts.

The first lows of a mother for her child is, with the lower saimals as with some, of a gurely instincting shareter, and as it consess when the child is so logger in a physically halphane conduction. After that, the first love shruld give way to one that is based on habit and reason, but this often fails to make its appearance, especially where the mother did not love the father. The love of a father for his child is of a different cortex, and more likely to lest, because thas its foundation in the fact that in the child he recognises his own inner self; thet is to easy, his love for it is contact, provided the origin.

In aimset all missions, whether of the artefant or the modern world, even amongst the Hottenton', proparity is inhesised by the male desensorint slone; it is only in Europe that a departure has taken place; but not amongst the mobility, however. That the property which has east men lung years of toil and affort, and been was with an anneal difficulty, should afformate come into the hundre of weaven, who then, in their lack of resums, squameder it in a short time, or otherwise lead it away, in a galevanus and a wrong as

¹ Long, Letin philosophys — Fundinger at in perfect hold do manne, our godge latter — (Longs, p. 298, Paca, 1600.

serious as A is summent, which should be prevented by limiting the right of women to labetit. In my opinion the heat arrangement would be that by which women, whether widows or descritors, should never receive anything beyond the interest for life on pro-perty secured by mortgage, and in so one the property itself, or the capital, except where all male descendants fail. The people who make money are men, not women; and it follows from this that women are neither justified in having neconditional possession. of it, nor | persons to be entrested with its adminustration. When wealth, in any true sense of the word, that m to say, funds, because or land, is to go to tham. as an inheritance, they should never be allowed the free disposition of it. In their once a grantian should always be appointed, and beace they should never be given the free control of their own shildren. wherever it can be avoided. The vanisty of woman, even though its should not prove to be greater than that of men, has this menh danger in it that it takes an entirely meterial dimension. They are valo, I mena, of their personal heavily, and then of faury. show and magnifermen. That is just why they are so much in their element in somety. It is this too which makes them so justined to be outravarant all the more as their remaining power is low. Accordingly we find an eminet writer describing woman at in general of an enterrogent meture. Ford to riveder are derarged some. But with more vanity often taken the direction of non-material advantages, such m intellect, learning, commun.

^{*} Branck's Cornect perior grand, v. L.B.,

In the Political Arietatle explains the great diadrantage which neered to the Spertum from the fact that they researed too much to their woman, by giving them the right of inheritance and dower, and a prest amount of indopendence; and he shows how much this contributed to Spacia's fall. May it not be the case in France that the indicator of woman. which went on increasing shouldy from the time of Louis XIII, was to blume for that gradual corruption of the Court and the Government, which brought about the Revolution of 1780, of which all subsequent distorbances have been the fruit? However that may be, the false position which women perupy. demonstrated as it is, in the most glaring way, by the institution of the lady, is a fundamental defect in our social scheme, and this defect, proceeding from the very heart of it, must spread its beneful infinence in all directions.

That women is by nature meant to elsey may be note by the fact that every wotcan who is placed in the unnatural position of complete independence, immediately attaches hereoff to some man, by whom she allows hereoff to be guided and roled. It us because the needs is lard and marker. If she is young, it will be a lover, if this is add, a pricet.

² Bb. L. m. &

ON NOTES.

KART wrote a treation on The Fital Powers. I should prefer to write a diego for them. The exper-abundant display of vitality, which takes the form of knocking hazemening and tumbling things about, has proved a daily torment to me all my life long. There are people, it is true may, a great many people—who smile at auch things, because they are uct aspettive to noise; but they are just the very people who are sho not sensitive to argument, or thought, or postry, or art, in a word, to say kind of tatallectual influence. The resem of it is that the times of their brains is of a very rough and coarse quality. On the other hand, noise is a torture to intellectual people. In the biographics of almost all great writers, or wherever also their personal ulteraness are recorded. I find complaints about it: in the case of Kant. for instance. Goothe, Lichtenburg, Jean Paul; and if it should happen that any water has emitted to express himself on the matter it is only for want of an opportunity.

This avaraion to noise I should explain as follows: If you eat up a large diamend into little bits, it will entirely less the value it had we a whole; and an army divided up into small bottle of soldiers less all its strength. So a great intellect stake to ;

the level of an ardinary one as soon as it is interrupted and disturbed, its attention distracted and drawn off from the matter in hand; for its superiority depends mpop its power of communication—of bringing all its elvength to bear upon one theme, for the same way as a conceve relevor collects into one print all the regu of light that strike upon it. Holey interrupton is a hindrence to this concentration. That is why distinguished minds have always shows such an extreme dislike to disturbance in any form, as something that basic in the contraction of the property of th commandment. Neise is the most impertizent of all forms of interruption. It is not only an interruption. but also a disruption of thought. Of course, where there is nothing to interrupt, noise will not be so particularly painful. Occasionally is happens that some alight but constant noise continues to bother and distinct me for a fine before I become distinctly gonecious of it. All I feet in a steady increase in the labour of thinking just no though I were trying to walk with a wearbt on my foot. I but I find out what it is.

Let me now, however, pute from querie to species. The most incurrently and diagraceful of all anises in the creeking of whips—a truly infernal thing when it is done in the nervour renumeling streets of a town. I descenses it as making a presented hith impossible;

it puts as and to all quint thought. That this gracking Iff whips should be allowed at all seems to me to
show in the clearest way how smandless and thoughtloss is the nature of mention. No one with anything
like an idea in his head can awaid a feating of actual
pairs at thus medies, sharp smolt, which paralyses the
train, rends the thread of collection, and morders
thought. Every time this coice is made it quant district
houghts away then this coice is made it may be;
while on the times out, we matter how trivial it may be;
while on the times out we mader, such as the exsentioner's are severe the head from the hot, No
sound, be it ever so chrill, outs so charply into the
brain as this caused creoting of whips; you feal the
string of the least right inside your head, and it
affects the brain in the same way as touch affects a
semblice cleak, and for the same to made of the origin in

With all due respect for the most holy dostrine of tablity. I really essent see why a phore who is taking sway a waggun-lead of graved or dung should thereby obtain the right to itill in the bud the thoughts which may happen to be springing up in ton thousand heads—the number les will distorb one after another in half an bent's drive through the town. Hammering, the barking of dogs, and the evying of shildren are horrible sounds; but your only genume assumm of throught is the easek of a whip; it saints for the purpose of destroying every pleasant somest of quiet throught that any one may new mad then unjoy. If the driver had no other way of unging on his borne than by making this mant abousantle of all coins, it

would be encomble; but quite the emissay is the pase. This cornell marking of whips is not only un-tiposity but even unders. Its aim is to produce an effect upon the intelligence of the home; but through the constant abuse of it the suimal becomes habituated to the sound, which falls upon blunted flainings and produces no effect at all. The forms does not go any the faster for it. You have a samerkable agazople of this in the massless qualking of his whip on the part of a cab-driver, while he is presending at a slow page on the look-rate for a furn. If he were to give his home the alightest teach with the whip, it would have much more affect. Supposing, however, that it were shoulded precessory to exact the whip in order to keep the horse consently in mind of its presence, it would be enough to make the bundred th part of the noise. For it is a well-known fact that in recard to night and bearing calmale are smaltive to even the faintest indications; they are alive to things that we can amendy perceive. The mest surprising instances of this are furnished by trained dogs and canary-hirds.

It is obvious, therefore, that have we have to do with an act of pase wantaments; nay, with an inpudent dafface effected or thines members of the community who work with their heads by those who work with their heads. That each helmay should be tolerated in a town in p piece of barbarity and iniquity, all the more so it could easily be ransdied by a police-notice to the effect that every lash shall have a knot at the say of the could read to the fact in the entire in drawing the attention of the much to the fact

that the chance above these work with their heads. for any kind of bundwork is muchal anguish to the man in the street. A follow who vides through the narrow allays of a populous town with unemployed post-homes or cart-homes, and keeps on cracking a whip several yards long with all his might deserves there and then to stand down and receive five really good blows with a stick. All the philanthropists in the world, and all the logislators, meeting to advocate and decree the total abolition of corporal punishment, will never persuade me to the contrary! There is will never personne to to converse; Inter a monothing even more diagraceful than what I have just mentioned. Often enough you may see a marker walking along the street, quite atome, without any horses, and still creating away increasantly, so necessatily, as necessatily, as a of the unwarrantable teleration of this practice. A man's body and the needs of his body are now everywhere treated with a tender indulgence. In the thinking mind, then, to be the only thing that is never to obtain the slightest measure of consideration or protection, to say nothing of respect? Carters, porters, measurequies—these are the beasts of borden amongst mankind; by all means let them be treated justly, fairly, indulgently, and with feestlonght; but they must not be permitted to stand in the way of the higher endeavement of kenemity by wastenly making a noise. How many great and splendid thoughts, I should like to know, have been lost to the world by the exact of a whip? If I had the upper hand, I should soon produce in the heads of these people on indimobile association

of ideas between exacking a whip and getting a whipping.

Lat us hope that the more inhilligant and refused among the nations will make a baginning in this matter, and then that the Germans may take example by it and follow mit." Mentuchile, I may quote what Thomas Hood may of them? For a musical notion. they are the most noise I over met with. That they are so is due to the feel, not that they are more fond of making a nous than other people-they would depy it if you saked them -- but that their armse are obtano, occuse neathy, when they hear a noise, it does not affect them much. It does not disturb them Il reading or thinking, simply because they do not think; they only smoke, which to their substitute for thought, The general toleration of concremery noise - the alamming of doors, for instance, a very unmanually and Ill-bred thing-is direct evidence that the prevailing habis of mind in dulaces and lock of thought. IS Germany it seems as though care were taken that no one should ever think for more noise—to mention one form of it, the way in which dramming goes on for no purpose at all.

Finally, so require the liberature of the subject treated of in this chapter. I have only one work to recommend, but it is a good one. I refer to a postical spirite in tersoriess by the fassess painter Broadine,

³ Associate to a notice immed by the Burkely for the Pyotontics of Associate in Minutely, the superimons wingsing and the reaching of whipe votes, in Teasurhers, 1888, posteruly heyledden in Neurosborn.

[&]quot; In Up the Blim.

antitled De Romovi: & Monor Ence Martini, 74 gives a detailed description of the torters to which people are put by the yearons mores of a mostl Italian town. Written in a trans-comic style at is very amusing. The splette may be found in Overe burlache dal Borns, Aratimo ad alleri, Vol. II., p. 258; apparently

published in Utracks in 1773-

A FEW PARABLES.

A FEW PARABLES.

In a field of ripening own I sume to a piece which had been trampled down by some cut-line foot, and a I glanced smooget the countiese valida, every one of them altim, who ding there so excel and bearing the full weight of the ear, I saw a multitude of different forwar, set and blee and violes. Bow presty they looked as they grow there so naturally with their little follage! Dut thought I, they are quite malent to remain only because there is no getting rid of them. And yet, but for these flowers, there would be nothing to sharm the eye in the wilderment of stalks. They are smilesmatic of poetry and art, which, in civic life —to evere, but still mental and one without its fruit —blay the name parts as flowers in the core.

There are some really impatical landscapes in the world, but the leasen figures in them are poor, and you had not better look at them.

The fly ought to be used as the symbol of importing each and atcheftly, for whilst all other unimals shun man more than anything else, and run oway own before he cannot must them, the fly lights upon his very Two Chinaman inswelling in Europe went to the thanke for the first time. One of them did nothing but study the machinery, and he assesseded in finding out how it was worked. The other tried is got at the meaning of the piece in upits of his ignorance of the language. Here you have the Astronomer and the Philosopher.

Windom which is only theoretical and never pubinto precision in like a double seas; its orders and its partime are falightful, but is without away and leaves no med.

No rose without a thorn. Yes, but many a thorn without a rose.

A wide-openeding apple-from choose in full bloom, and bahred it a stemplet the related by dark and taparing head. Look at the threamed of page bloomes acked, cover one consequently, said the apple-tree; solut have you to alone in comparison? Darboyroon, solut have you to alone in comparison? Darboyroon madker 17the 64 true, replied the first plant when wrister somes, you settly be become of your plany; and I shall be an I

Once, as I was botanising under an oak, I found amongst a number of other plants of visules beight one that was don't in colour, with highly closed loave and a stalk that was very stronget and still. When I conched it, is said to use in firm tower: Let we clove; I are not for your collection, bills there glotte to which the

Hotore has given stily a slegte year of life. I not a little eak.

So it is with a most whose influence in to last fix hundreds of years. As a child, me a youth, offers even as a full-grown men, may, his whole life long, he goes shout among his follows, looking late there and seeningly as underpowhent. But let him alone, he will not die. Time will come and loving those who know how to value hun.

The man who goes up in a balloon does not feel as though he were assemding; he only seen the earth sinking deeper and desper under him.

This is a myetery which only those will understand.

Tour artimation of a man's size will be affected by the distance at which you stand from him, hot in two enturaly opposite ways according as it is his physical or his mantal stature they you are considering. The one will seem smaller, the farther off you move; the other,

Mattre covers all her works with a versich of beauty, like the tander bleem that is lumithed, as it were, on the surface of a proofs or a plane. Peaketst and poste lay thouselves out to take off this versish, to store it up, and give it as in he enjoyed at our leiture. We drink deep of this humby long before we untur upon life itself, and when afterwards we come to see the works of Nature for consolves, the versish is generate action have an under the part of the second of

advane. Thus it is that the world so clean appears harch and devoid of charms, may, autually repulsive. It were better to leave us to discover the varnish for ourselves. This would mean that we should not enjoy it all ut once and in large quantities; ; we should have an finished pictures, me perfect posses, but we should leak at all things in that genial and planting light in which even new a chief of Mature sometimes seas them—some one who has not anticipated his sethatia plasques by the help of ort, or taken the charms of life too series.

The Chikhedmal in Maymore is on cheek in by the homes that are built round about it that there is no one apot from which you can one it on a whole. This is symbolic of overything great or beautiful in the world. It ought to cause for its own sakes alone, but before very long it is misused to serve alim ands. People some from all discretions wasning to find in it support and measurement for themselves; they stand in the way and spoil the effect. To be may, there is nothing surprising in this, for it is would of need and imperfection everything; in same dupont which may be used to nexisty want. Making it succept from this service, no, not oven those very things which arise only when need and want am for a measure tool sight of—the besettiful and the true, sought for their own when

This is especially illustrated and nurrelevated in the case of matterians—whether great or small, wealthy or poor, founded, no matter in what century

or in what had, to maintain and advance human knowledge, and generally to affird help to those intellactual efforts which muchlis tim mos. Whosever these institutions may be, it is not long before recole mask up to them under the pretures of wishing to further those special suchs, while they are really led on by the desire to secure the emeloments which have been left for their furtherance, and thus to satisfy sertain coarse and brused instincts of their Thus it is that we wouse to have so many sharlatana in every branch of knowledge. The charlaten takes very different eleges constding to caronmstances; but \$1 bottom be in a man who cares nothing about knowledge for its own cake, and only strives to rain the semblance of it that he may use it for his own personal ends, which are always selfah and meterial.

Every here is a Samon. The strong man accounts to the intrigues of the weak and the many; and if in the end he ions all pasience he creakes both them and himself. Or he is like Gallierer at Liliput, overwhelmed by an enormous neather of tittle men.

A mother gave best children Alesgo's flatfes to read, in the boyes of educating and feaperwing their minds, but they were soon brought files book teach, and this aldest, wise beyond his years, chilvested himself as follows: Their one heads for an; sit weeks too children of the stayloid. For each make us believe that forces and trooped and resone are able to this; surfue got beyond storying of floot blood if

In these young hopefule you have the unlightened Rationalists of the figure.

A number of possessions hadded together the warmth on a cold day in winter; but, as they began Its prick ma another with their quills, they ware obliged to dimerse. However the cold drove them together again, when just the same thing happened. At hat, after many turns of haddling and dispersion. they discovered that they would be best off by remaining at a little distance from one appther. In the taken way the weed of seciety drives the human porturines together, only to be metually repelled by the many prickly and disagreeable qualities of their nature. The mederate distance which they at last discover to be the only tolerable condition of intersource |s the code of politoness and fine manners; and those who transgress it are roughly told-in the English phrase to loop their distance. By this arrangement the mutual used of wartable only very medacalsty astinfed, but then people do not get prioted. A man who has some best in himself meform to remain conside, where he will neither prick other people are get printed himself.
